Functional Description

The CY29942 is a low voltage clock distribution buffer with an LVCMOS or LVTTL compatible clock input. The output enable control input is LVCMOS/LVTTL compatible. The eighteen outputs are 2.5 V or 3.3 V LVCMOS or LVTTL compatible, operate up to 200 MHz, and can drive 50 Ω series or parallel terminated transmission lines. For series terminated transmission lines, each output can drive one or two traces, giving the devices an effective fanout of 1:36. Low output-to-output skews make the CY29942 an ideal clock distribution buffer for nested clock trees in the most demanding of synchronous systems.

Absolute Maximum Ratings

Exceeding the maximum ratings may impair the useful life of the device. User guidelines are not tested. [1]

Maximum input voltage relative to V_{SS}: ..... V_{SS} – 0.3 V

Maximum input voltage relative to V_{DD}: ..... V_{DD} + 0.3 V

Storage temperature: ..... –65 °C to 150 °C

Operating temperature: ..... –40 °C to 85 °C

Maximum ESD protection ..... 2 kV

Maximum power supply: ..... 5.5 V

Maximum input current: ..... ±20 mA

This device contains circuitry to protect the inputs against damage due to high static voltages or electric field; however, precautions should be taken to avoid application of any voltage higher than the maximum rated voltages to this circuit. For proper operation, I/O voltages should be constrained to the range:

$V_{SS} < V_{I/O} < V_{DD}$

Unused inputs must always be tied to an appropriate logic voltage level (either V_{SS} or V_{DD}).

DC Electrical Specifications

V_{DD} = 3.3 V ± 5% or 2.5 V ± 5% over the specified temperature range.
