Multilayer Organic (MLO®) Inductors **Tight Tolerance**

The Multilayer Organic Tight Tolerance Inductor is a low profile organic based inductor that can support mobile communications, satellite applications, GPS, matching networks, and collision avoidance. The MLO® Tight Tolerance Inductor series of components are based on KYOCERA AVX patented multilayer organic technology (US patent 6,987,307). MLO® Tight Tolerance Inductors incorporate very low loss organic materials which allow for high Q and high stability over frequency. MLO® Tight Tolerance Inductors are surface mountable and are expansion matched to FR4 printed wiring boards. MLO® Tight Tolerance Inductors utilize fine line high density interconnect technology thereby allowing for tight tolerance control and high repeatability. Reliability testing is performed to JEDEC and mil standards. Finishes are available in RoHS compliant Sn.

Component Pad Design

Component pads should be designed to achieve good solder filets and minimize component movement during reflow soldering. pad designs are given below for the most common sizes of multilayer ceramic capacitors for both wave and reflow soldering. The basis of these designs is:

· Pad width equal to component width. It is permissible to decrease this to as low as 85% of component width but it is not advisable to go below this.

• Pad overlap 0.5mm beneath component.

· Pad extension 0.5mm beyond components for relow and 1.0mm to wave soldering.
