<https://www.DiGi-Electronics.com>

DiGi Electronics Part Number	ADG438FBRZ-DG
Manufacturer	<a href="#">Analog Devices Inc.</a>
Manufacturer Product Number	ADG438FBRZ
Description	IC MUX 8:1 2700HM 16SOIC
Detailed Description	1 Circuit IC Switch 8:1 2700hm (Typ) 16-SOIC

This model ADG438FBRZ is available at DiGi Electronics.

DiGi Electronics offers a global database of semiconductor and electronic component datasheets.

We welcome your inquiries regarding pricing, lead time, or other product-related questions.

## Purchase and inquiry

Manufacturer Product Number:

ADG438FBRZ

Series:

-

Switch Circuit:

-

Number of Circuits:

1

Channel-to-Channel Matching ( $\Delta R_{on}$ ):

8.10hm

Voltage - Supply, Dual ( $V_{\pm}$ ):

$\pm 15V$

-3db Bandwidth:

-

Channel Capacitance ( $C_{S(off)}$ ,  $C_{D(off)}$ ):

3pF, 22pF

Crosstalk:

-93dB @ 100kHz

Mounting Type:

Surface Mount

Supplier Device Package:

16-SOIC

Manufacturer:

Analog Devices Inc.

Product Status:

Active

Multiplexer/Demultiplexer Circuit:

8:1

On-State Resistance (Max):

2700hm (Typ)

Voltage - Supply, Single ( $V_{+}$ ):

15V

Switch Time ( $T_{on}$ ,  $T_{off}$ ) (Max):

230ns, 130ns

Charge Injection:

15pC

Current - Leakage ( $I_{S(off)}$ ) (Max):

500pA

Operating Temperature:

-40°C ~ 125°C (TA)

Package / Case:

16-SOIC (0.154", 3.90mm Width)

Base Product Number:

ADG438

## Environmental & Export classification

RoHS Status:

ROHS3 Compliant

REACH Status:

REACH Unaffected

HTSUS:

8542.39.0001

Moisture Sensitivity Level (MSL):

1 (Unlimited)

ECCN:

EAR99

# High Performance, 4-/8-Channel, Fault-Protected Analog Multiplexers

## ADG438F/ADG439F

### FEATURES

- All switches off with power supply off
- Analog output of on channel clamped within power supplies if an overvoltage occurs
- Latch-up proof construction
- Fast switching times
  - $t_{ON}$  250 ns maximum
  - $t_{OFF}$  150 ns maximum
- Fault and overvoltage protection:  $-40\text{ V}$  to  $+55\text{ V}$
- Break-before-make construction
- TTL- and CMOS-compatible inputs

### APPLICATIONS

- Data acquisition systems
- Industrial and process control systems
- Avionics test equipment
- Signal routing between systems
- High reliability control systems

### GENERAL DESCRIPTION

The [ADG438F](#) and [ADG439F](#) are CMOS analog multiplexers, with the [ADG438F](#) comprising eight single channels and the [ADG439F](#) comprising four differential channels. These multiplexers provide fault protection. Using a series n-channel, p-channel, and n-channel MOSFET structure, both device and signal source protection is provided in the event of an overvoltage or power loss. The multiplexer can withstand continuous overvoltage inputs from  $-40\text{ V}$  to  $+55\text{ V}$ . During fault conditions with power supplies off, the multiplexer input (or output) appears as an open circuit and only a few nanoamperes of leakage current flows. This protects not only the multiplexer and the circuitry driven by the multiplexer, but also protects the sensors or signal sources which drive the multiplexer.

The [ADG438F](#) switches one of eight inputs to a common output as determined by the 3-bit binary address lines, A0, A1, and A2. The [ADG439F](#) switches one of four differential inputs to a common differential output as determined by the 2-bit binary address lines, A0 and A1. An EN input on each device is used to enable or disable the device. When disabled, all channels are switched off.

#### Rev. E

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications subject to change without notice. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices. ### FUNCTIONAL BLOCK DIAGRAM

Figure 1.

Figure 2.

### PRODUCT HIGHLIGHTS

1. Fault Protection. The [ADG438F](#) and [ADG439F](#) can withstand continuous voltage inputs up to  $-40\text{ V}$  or  $+55\text{ V}$ . When a fault occurs due to the power supplies being turned off, all the channels are turned off and only a leakage current of a few nanoamperes flows.
2. On channel saturates while fault exists.
3. Low  $R_{ON}$ .
4. Fast Switching Times.
5. Break-Before-Make Switching. Switches are guaranteed break-before-make so that input signals are protected against momentary shorting.
6. Trench Isolation Eliminates Latch-Up. A dielectric trench separates the p-channel and n-channel MOSFETs thereby preventing latch-up.
7. Improved Off Isolation. Trench isolation enhances the channel-to-channel isolation of the [ADG438F/ADG439F](#).

## ABSOLUTE MAXIMUM RATINGS

$T_A = 25^\circ\text{C}$  unless otherwise noted.

**Table 2.**

Parameter	Rating
$V_{DD}$ to $V_{SS}$	48 V
$V_{DD}$ to GND	-0.3 V to +48 V
$V_{SS}$ to GND	+0.3 V to -48 V
Digital Input, EN, Ax	-0.3 V to $V_{DD} + 0.3$ V or 20 mA, whichever occurs first
$V_S$ , Analog Input Overvoltage with Power On ( $V_{DD} = +15$ V, $V_{SS} = -15$ V)	$V_{SS} - 25$ V to $V_{DD} + 40$ V
$V_S$ , Analog Input Overvoltage with Power Off ( $V_{DD} = 0$ V, $V_{SS} = 0$ V)	-40 V to +55 V
Continuous Current, S or D	20 mA
Peak Current, S or D (Pulsed at 1 ms, 10% Duty Cycle Maximum)	40 mA
Operating Temperature Range	
Industrial (B Version)	-40°C to +125°C
Storage Temperature Range	-65°C to +150°C
Junction Temperature	150°C
Plastic DIP Package	
$\theta_{JA}$ , Thermal Impedance	117°C/W
SOIC Package	
$\theta_{JA}$ , Thermal Impedance	
Narrow Body	125°C/W
Wide Body	90°C/W

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### ESD CAUTION

#### ESD (electrostatic discharge) sensitive device.

Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## TERMINOLOGY

**V<sub>DD</sub>**

Most positive power supply potential.

**V<sub>SS</sub>**

Most negative power supply potential.

**GND**

Ground (0 V) reference.

**R<sub>ON</sub>**

Ohmic resistance between D and S.

**ΔR<sub>ON</sub>**

ΔR<sub>ON</sub> represents the difference between the R<sub>ON</sub> of any two channels as a percentage of the maximum R<sub>ON</sub> of those two channels.

**R<sub>FLAT (ON)</sub>**

Flatness is defined as the difference between the maximum and minimum value of the on resistance measured over the specified analog signal range and is represented by R<sub>FLAT (ON)</sub>.

Flatness is calculated by

$$((R_{MAX} - R_{MIN}) / R_{MAX} \times 100)$$

**R<sub>ON</sub> Drift**

Change in R<sub>ON</sub> when temperature changes by one degree Celsius.

**I<sub>S</sub> (Off)**

Source leakage current when the switch is off.

**I<sub>D</sub> (Off)**

Drain leakage current when the switch is off.

**I<sub>D</sub>, I<sub>S</sub> (On)**

Channel leakage current when the switch is on.

**V<sub>D</sub> (V<sub>S</sub>)**

Analog voltage on Terminal D and Terminal S.

**I<sub>S</sub> (Fault—Power Supplies On)**

Source leakage current when exposed to an overvoltage condition.

**I<sub>D</sub> (Fault—Power Supplies On)**

Drain leakage current when exposed to an overvoltage condition.

**I<sub>S</sub> (Fault—Power Supplies Off)**

Source leakage current with power supplies off.

**C<sub>S</sub> (Off)**

Channel input capacitance for off condition.

**C<sub>D</sub> (Off)**

Channel output capacitance for off condition.

**C<sub>D</sub>, C<sub>S</sub> (On)**

On switch capacitance.

**C<sub>IN</sub>**

Digital input capacitance.

**t<sub>ON</sub> (EN)**

Delay time between the 50% and 90% points of the digital input and switch on condition.

**t<sub>OFF</sub> (EN)**

Delay time between the 50% and 90% points of the digital input and switch off condition.

**t<sub>TRANSITION</sub>**

Delay time between the 50% and 90% points of the digital inputs and the switch on condition when switching from one address state to another.

**t<sub>OPEN</sub>**

Off time measured between 80% points of both switches when switching from one address state to another.

**V<sub>INL</sub>**

Maximum input voltage for Logic 0.

**V<sub>INH</sub>**

Minimum input voltage for Logic 1.

**I<sub>INL</sub> (I<sub>INH</sub>)**

Input current of the digital input.

**Off Isolation**

A measure of unwanted signal coupling through an off channel.

**Charge Injection**

A measure of the glitch impulse transferred from the digital input to the analog output during switching.

**I<sub>DD</sub>**

Positive supply current.

**I<sub>SS</sub>**

Negative supply current.

## THEORY OF OPERATION

The [ADG438F/ADG439F](#) multiplexers are capable of withstanding overvoltages from  $-40\text{ V}$  to  $+55\text{ V}$ , irrespective of whether the power supplies are present or not. Each channel of the multiplexer consists of an n-channel MOSFET, a p-channel MOSFET, and an n-channel MOSFET, connected in series. When the analog input exceeds the power supplies, one of the MOSFETs saturates, limiting the current. The current during a fault condition is determined by the load on the output. Figure 31 illustrates the channel architecture that enables these multiplexers to withstand continuous overvoltages.

When an analog input of  $V_{SS} + 2.2\text{ V}$  to  $V_{DD} - 2.2\text{ V}$  (output loaded,  $1\text{ mA}$ ) is applied to the [ADG438F/ADG439F](#), the multiplexer behaves as a standard multiplexer, with specifications similar to a standard multiplexer, for example, the on-resistance is  $270\ \Omega$  typically. However, when an overvoltage is applied to the device, one of the three MOSFETs saturates.

Figure 29 to Figure 32 show the conditions of the three MOSFETs for the various overvoltage situations. When the analog input applied to an on channel approaches the positive power supply line, the n-channel MOSFET saturates because the voltage on the analog input exceeds the difference between  $V_{DD}$  and the n-channel threshold voltage ( $V_{TN}$ ). When a voltage more negative than  $V_{SS}$  is applied to the multiplexer, the p-channel MOSFET saturates because the analog input is more negative than the difference between  $V_{SS}$  and the p-channel threshold voltage ( $V_{TP}$ ). Because  $V_{TN}$  is nominally  $1.4\text{ V}$  and  $V_{TP} - 1.4\text{ V}$ , the analog input range to the multiplexer is limited to  $V_{SS} + 1.4\text{ V}$  to  $V_{DD} - 1.4\text{ V}$  (output open circuit) when a  $\pm 15\text{ V}$  power supply is used.

When the power supplies are present but the channel is off, again either the p-channel MOSFET or one of the n-channel MOSFETs remains off when an overvoltage occurs.

Finally, when the power supplies are off, the gate of each MOSFET is at ground. A negative overvoltage switches on the first n-channel MOSFET, but the bias produced by the overvoltage causes the p-channel MOSFET to remain turned off. With a positive overvoltage, the first MOSFET in the series remains off because the gate to source voltage applied to this MOSFET is negative.

During fault conditions (power supplies off), the leakage current into and out of the [ADG438F/ADG439F](#) is limited to a few microamps. This limit protects the multiplexer and succeeding circuitry from over stresses as well as protects the signal sources that drive the multiplexer. Also, the other channels of the multiplexer are undisturbed by the overvoltage and continue to operate normally.

Figure 29.  $+55\text{ V}$  Overvoltage Input to the On Channel

Figure 30.  $-40\text{ V}$  Overvoltage on an Off Channel with Multiplexer Power On

Figure 31.  $+55\text{ V}$  Overvoltage with Power Off

Figure 32.  $-40\text{ V}$  Overvoltage with Power Off

**ADG438F/ADG439F**

COMPLIANT TO JEDEC STANDARDS MS-013-AA  
 CONTROLLING DIMENSIONS ARE IN MILLIMETERS; INCH DIMENSIONS  
 (IN PARENTHESES) ARE ROUNDED-OFF MILLIMETER EQUIVALENTS FOR  
 REFERENCE ONLY AND ARE NOT APPROPRIATE FOR USE IN DESIGN.

03-27-2007-B

 Wide Body  
 (RW-16)  
 Dimensions shown in millimeters and (inches)

**ORDERING GUIDE**

Model <sup>1</sup>	Temperature Range	Package Description	Package Option
ADG438FBN	-40°C to +125°C	16-Lead Plastic Dual In-Line Package [PDIP]	N-16
ADG438FBNZ	-40°C to +125°C	16-Lead Plastic Dual In-Line Package [PDIP]	N-16
ADG438FBR	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16
ADG438FBR-REEL	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16
ADG438FBRZ	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16
ADG438FBRZ-REEL	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16
ADG439FBN	-40°C to +125°C	16-Lead Plastic Dual In-Line Package [PDIP]	N-16
ADG439FBNZ	-40°C to +125°C	16-Lead Plastic Dual In-Line Package [PDIP]	N-16
ADG439FBR	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16
ADG439FBR-REEL	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16
ADG439FBRW	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_W]	RW-16
ADG439FBRWZ	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_W]	RW-16
ADG439FBRWZ-REEL	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_W]	RW-16
ADG439FBRZ	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16
ADG439FBRZ-REEL	-40°C to +125°C	16-Lead Standard Small Outline Package [SOIC_N]	R-16

<sup>1</sup> Z = RoHS Compliant Part.
