MAXIM

Dual/Quad RF/Video Switches

General Description

The IH5341 and the IH5352 are dual and quad, single pole single throw (SPST) switches designed specifically for switching RF and video signals. Maxim's IH5341 and IH5352 incorporate an enhanced series-shunt-series structure, providing 70dB of OFF isolation and cross coupling rejection (an additional 10dB compared with other manufacturers' products).

Both devices can be operated with supplies ranging from ±5V to ±15V. The switches typically have a t_{ON} = 160ns and a t_{OFF} = 70ns, assuring break-before-make switching. The channel thruput resistance of 50Ω provides excellent matching to video impedances. In the D.C. state, with switches being either on or off, power supply quiescent currents are typically 100nA. This limits the quiescent current drain to 3μ watts—ideal for portable equipment.

Applications

These devices are used in applications requiring the routing, blocking or switching of video or RF signals such as:

Commercial TV Cameras
Video Special Effects
Low Power RF Switching
Radar Switching
Mil and Space Communications
