www.digi-electronics.com

<https://www.DiGi-Electronics.com>

DiGi Electronics Part Number	MAX6326UR23-T-DG
Manufacturer	Analog Devices Inc./Maxim Integrated
Manufacturer Product Number	MAX6326UR23-T
Description	IC SUPERVISOR 1 CHANNEL SOT23-3
Detailed Description	Supervisor Push-Pull, Totem Pole 1 Channel SOT-23-3

This model MAX6326UR23-T is available at DiGi Electronics.

DiGi Electronics offers a global database of semiconductor and electronic component datasheets.

We welcome your inquiries regarding pricing, lead time, or other product-related questions.

Purchase and inquiry

Manufacturer Product Number:

MAX6326UR23-T

Series:

-

DiGi-Electronics Programmable:

Not Verified

Number of Voltages Monitored:

1

Output:

Push-Pull, Totem Pole

Reset Timeout:

100ms Minimum

Mounting Type:

Surface Mount

Supplier Device Package:

SOT-23-3

Manufacturer:

Analog Devices Inc./Maxim Integrated

Product Status:

Obsolete

Type:

Simple Reset/Power-On Reset

Voltage - Threshold:

2.32V

Reset:

Active Low

Operating Temperature:

-40°C ~ 85°C (TA)

Package / Case:

TO-236-3, SC-59, SOT-23-3

Base Product Number:

MAX6326

Environmental & Export classification

RoHS Status:

ROHS3 Compliant

REACH Status:

REACH Unaffected

HTSUS:

8542.39.0001

Moisture Sensitivity Level (MSL):

1 (Unlimited)

ECCN:

EAR99

MAX6326/MAX6327/ MAX6328/MAX6346/ MAX6347/MAX6348

General Description

The MAX6326/MAX6327/MAX6328/MAX6346/MAX6347/MAX6348 microprocessor (μ P) supervisory circuits monitor the power supplies in μ P and digital systems. These devices provide excellent circuit reliability and low cost by eliminating external components and adjustments when used with 2.5V, 3V, 3.3V, and 5V powered circuits.

These circuits perform a single function: they assert a reset signal whenever the V_{CC} supply voltage declines below a preset threshold, keeping it asserted for at least 100ms after V_{CC} has risen above the reset threshold. The only difference between the devices is their output. The MAX6326/MAX6346 (push-pull) and MAX6328/MAX6348 (open-drain) have an active-low reset output. The MAX6327/MAX6347 have an active-high push-pull reset output. All of these parts are guaranteed to be in the correct state for V_{CC} down to 1V. The reset comparator is designed to ignore fast transients on V_{CC} . Reset thresholds are factory-trimmable between 2.2V and 4.63V, in approximately 100mV increments. Twenty-one standard versions are available. Contact the factory for availability of nonstandard versions.

Ultra-low supply currents (1 μ A max for the MAX6326/MAX6327/MAX6328) make these parts ideal for use in portable equipment. All six devices are available in space-saving SOT23 and SC70 packages.

Applications

- Computers
- Intelligent Instruments
- Controllers
- Critical μ P and μ C
- Power Monitoring
- Portable/Battery-Powered Equipment

Pin Configuration

3-Pin, Ultra-Low-Power SC70/SOT μ P Reset Circuits

Features

- Ultra-Low 1 μ A (max) Supply Current (MAX6326/MAX6327/MAX6328)
- Precision Monitoring of 2.5V, 3V, 3.3V, and 5V Power-Supply Voltages
- Reset Thresholds Available from 2.2V to 4.63V
- Fully Specified Over Temperature
- 100ms (min) Power-On Reset Pulse Width
- Low Cost
- Available in Three Versions: Push-Pull $\overline{\text{RESET}}$, Push-Pull RESET, and Open-Drain $\overline{\text{RESET}}$
- Power-Supply Transient Immunity
- No External Components
- 3-Pin SC70/SOT23 Packages
- Pin Compatible with MAX803/MAX809/MAX810

Ordering Information

†The MAX6326/MAX6327/MAX6328/MAX6346/MAX6347/MAX6348 are available in factory-set V_{CC} reset thresholds from 2.2V to 4.63V, in approximately 0.1V increments. Choose the desired reset-threshold suffix from Table 1 and insert it in the blank spaces following "R". There are 21 standard versions with a required order increment of 2500 pieces. Sample stock is generally held on the standard versions only (see the Selector Guide). Required order increment is 10,000 pieces for nonstandard versions (Table 2). Contact factory for availability. All devices available in tape-and-reel only. Devices are available in both leaded and lead-free packaging. Specify lead-free by replacing "-T" with "+T" when ordering.

Selector Guide appears at end of data sheet.

3-Pin, Ultra-Low-Power SC70/SOT
μP Reset Circuits

Absolute Maximum Ratings

Terminal Voltage (with respect to GND)

V_{CC}	-0.3V to +6V
RESET, $\overline{\text{RESET}}$ (push-pull).....	-0.3V to ($V_{CC} + 0.3V$)
$\overline{\text{RESET}}$ (open drain).....	-0.3V to +6V
Input Current (V_{CC}).....	20mA
Output Current (RESET, $\overline{\text{RESET}}$).....	20mA
Rate of Rise (V_{CC}).....	100V/μs

Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)

3-Pin SC70 (derate 2.7mW/°C above +70°C).....	174mW
3-Pin SOT23 (derate 4mW/°C above +70°C).....	320mW
Operating Temperature Range.....	-40°C to +85°C
Storage Temperature Range.....	-65°C to +150°C
Lead Temperature (soldering, 10s).....	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics

(V_{CC} = full range, $T_A = -40^\circ\text{C}$ to +85°C, unless otherwise noted. Typical values are at $T_A = +25^\circ\text{C}$ and $V_{CC} = 3V$.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS		MIN	TYP	MAX	UNITS
V_{CC} Range		$T_A = 0^\circ\text{C}$ to +70°C		1.0		5.5	V

MAX6328/MAX6346/
MAX6347/MAX6348

3-Pin, Ultra-Low-Power SC70/SOT
 μ P Reset Circuits

Applications Information

Interfacing to μ Ps with Bidirectional Reset Pins

Since the $\overline{\text{RESET}}$ output on the MAX6328/MAX6348 is open drain, these devices interface easily with microprocessors (μ Ps) that have bidirectional reset pins, such as the Motorola 68HC11. Connecting the μ P supervisor's $\overline{\text{RESET}}$ output directly to the microcontroller's (μ C's) $\overline{\text{RESET}}$ pin with a single pull-up resistor allows either device to assert reset (Figure 1).

Negative-Going V_{CC} Transients

In addition to issuing a reset to the μ P during power-up, power-down, and brownout conditions, these devices are relatively immune to short-duration, negative-going V_{CC} transients (glitches).

The *Typical Operating Characteristics* show the Maximum Transient Duration vs. Reset Threshold Overdrive graph, for which reset pulses are not generated. The graph shows the maximum pulse width that a negative-going V_{CC} transient may typically have when issuing a reset signal. As the amplitude of the transient increases, the maximum allowable pulse width decreases.

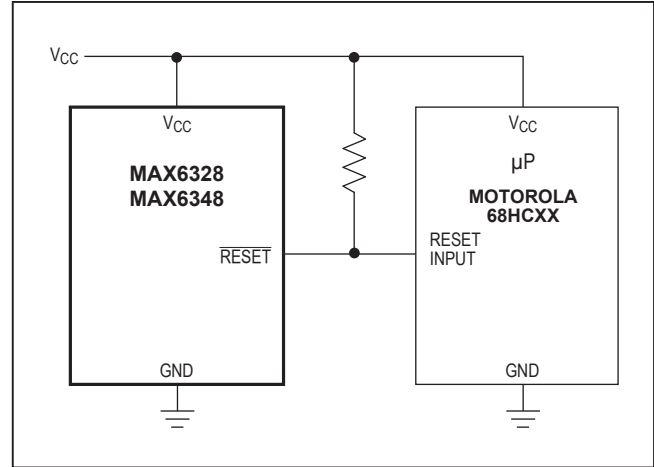

Figure 1. Interfacing to μ Ps with Bidirectional Reset Pins

Table 1. Factory-Trimmed Reset Thresholds \ddagger
