

MKV42F256VLH16P Datasheet

<https://www.DiGi-Electronics.com>

DiGi Electronics Part Number	MKV42F256VLH16P-DG
Manufacturer	NXP USA Inc.
Manufacturer Product Number	MKV42F256VLH16P
Description	IC MCU 32BIT 256KB FLASH 64LQFP
Detailed Description	ARM® Cortex®-M4 Kinetis KV Microcontroller IC 32-Bit Single-Core 168MHz 256KB (256K x 8) FLASH 64-LQFP (10x10)

This model MKV42F256VLH16P is available at DiGi Electronics.

DiGi Electronics offers a global database of semiconductor and electronic component datasheets.

We welcome your inquiries regarding pricing, lead time, or other product-related questions.

Purchase and inquiry

Manufacturer Product Number:

MKV42F256VLH16P

Series:

Kinetis KV

DiGi-Electronics Programmable:

Not Verified

Core Size:

32-Bit Single-Core

Connectivity:

CANbus, I2C, SPI, UART/USART

Number of I/O:

48

Program Memory Type:

FLASH

RAM Size:

32K x 8

Data Converters:

A/D 29x12b

Operating Temperature:

-40°C ~ 105°C (TA)

Supplier Device Package:

64-LQFP (10x10)

Base Product Number:

MKV42F256

Manufacturer:

NXP USA Inc.

Product Status:

Active

Core Processor:

ARM® Cortex®-M4

Speed:

168MHz

Peripherals:

DMA, LVD, POR, PWM, WDT

Program Memory Size:

256KB (256K x 8)

EEPROM Size:

-

Voltage - Supply (Vcc/Vdd):

1.71V ~ 3.6V

Oscillator Type:

Internal

Mounting Type:

Surface Mount

Package / Case:

64-LQFP

Environmental & Export classification

RoHS Status:

ROHS3 Compliant

REACH Status:

REACH Unaffected

Moisture Sensitivity Level (MSL):

3 (168 Hours)

High-performance
ARM® Cortex®-M4
core-based MCU
family for motor
and power control
applications

Kinetis KV4x MCU Family

The Kinetis KV4x family of microcontrollers (MCUs) is a high-performance solution offering exceptional precision, sensing and control for some of the most demanding applications in motor and power control enabled with Kinetis Motor Suite.

TARGET APPLICATIONS

- ▶ BLDC motors
- ▶ PMSM motors
- ▶ AC induction motors
- ▶ Multi-motor control
- ▶ Switched mode power supply
- ▶ Photovoltaic systems
- ▶ Uninterruptible power supply
- ▶ Advanced lighting

Built on the ARM Cortex-M4 core running at 168 MHz with DSP and floating-point unit (FPU), it features advanced high-speed and high-accuracy peripherals such as high-resolution pulse-width modulation (PWM) with 312 picosecond resolution, dual 12-bit analog-to-digital converters (ADCs) sampling at 4.1 mega samples per second (MSPS), a total of 30 PWM channels for support of multimotor systems and dual FlexCAN modules. To maximize execution performance a 128-bit wide flash interface is utilized, providing best-in-class execution from the embedded flash memory.

The Kinetis KV4x family of MCUs are supported by a comprehensive enablement suite both from us and third-party resources, including reference designs, software libraries and motor configuration tools.

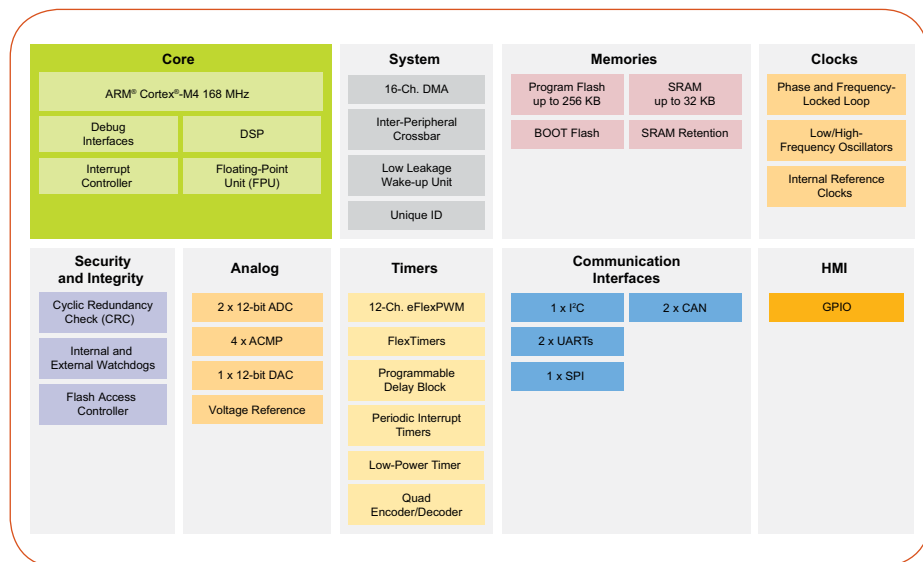

FEATURES AND BENEFITS

- ▶ 168 MHz Cortex-M4 core with DSP, FPU — Improves performance in math-intensive applications (e.g., processing of sensorless field oriented control (FOC) algorithms)
- ▶ 128-bit wide flash interface with cache to minimize the number of wait states while executing fast control loops
- ▶ 2x 12-bit, 16-channel ADCs with PGAs—4.1 MSPS for digital power conversion and motor control applications

- ▶ Up to 12 channel eFlexPWM—up to 312ps resolution for demanding digital power conversion applications
- ▶ Up to 2 x 8-channel and 1 x 2-channel programmable FlexTimers—High-accuracy PWM generation with integrated power factor correction or speed sensor decoder (incremental decoder/hall sensor)
- ▶ Up to 2 FlexCAN modules—High-speed, high reliability industrial communication
- ▶ Broad family scalability with hardware and software compatibility—Easy migration to more performance, memory and feature integration within the Kinetis V series

KINETIS KV4x MCU FAMILY BLOCK DIAGRAM

DEVELOPMENT TOOLS

Kinetis Motor Suite (KMS) is a software solution that enables the rapid configuration of motor drive systems, accelerates development of the final motor drive application while improving overall motor system performance due to its unique SpinTAC™ enabled speed controller. Tuning and optimization is carried out via a simple graphical user interface that enables a developer to easily identify their motor, tune that motor using just one control dial and build a state machine to control the various speed transitions of the motor.

TWR-KV46F168M

The TWR-KV46F168M board is a cost-effective, modular development module that features the Kinetis KV4x MCU in a 100 LQFP package, integrated OpenSDA debug adapter (requires no external debug interface) and is compatible with the Tower System peripheral cards, including TWR-MC-LV3PH 3-phase motor peripheral module.

HVP-MC3PH

The HVP-MC3PH platform enables development of 3-phase PMSM, BLDC and ACIM motor control and power factor correction (PFC) solutions in a safe high-voltage environment.

Compatible with the Kinetis KV4x MCU (and several other of our controllers), input voltage is 85–240 V AC, with output power of the motor stage up to 1 KW, with the ability to drive a 1.2 Hp motor, and 800 watts when utilizing the PFC stage.

TWR-MC-LV3PH

The TWR-MC-LV3PH low-voltage, 3-phase motor control Tower System peripheral module provides a complete motor control reference design kit for developing BLDC and PMSM motor solutions. Compatible with the Kinetis KV4x MCU (and several other of our controllers), it includes a 3-phase BLDC motor and motor drive circuitry.

Integrated Development Environment (IDE)

Kinetis V series MCUs are supported by MCUXpresso Software and Tools (IDE, SDK, Config Tools), Kinetis Design Studio IDE, IAR Embedded Workbench® for ARM and ARM Keil Microcontroller Development Kit. All IDEs support the Processor Expert auto code generator—a GUI-based, device-aware software configuration tool that automatically generates peripheral start-up code and device drivers to dramatically reduce application development time.

FreeMASTER

FreeMASTER is a free, simple, yet highly customizable real-time debug monitor and data visualization tool designed for software development that requires real-time data access.

Motor Control Toolbox

Our motor control development toolbox is a comprehensive collection of tools that plug into the MATLAB™/Simulink™ model-based design environment to support rapid application development targeting our MCUs.

Reference Designs Built on Embedded Motor Control and Power Conversion Libraries

- ▶ Extensive suite of complimentary reference designs for ACIM, BLDC and PMSM motor control built on NXP's Embedded Software libraries and motor configuration tools.
- ▶ Complex real-time control applications
- ▶ Core self-test libraries for simpler IEC 60730 certification
