D6T-1A-02 Datasheet

www.digi-electronics.com

DiGi Electronics Part Number	D6T-1A-02-DG
Manufacturer	Omron Electronics Inc-EMC Div
Manufacturer Product Number	D6T-1A-02
Description	SENSOR DIGITAL -40C-80C MODULE
Detailed Description	Temperature Sensor Digital, Local -40°C ~ 80°C Module

https://www.DiGi-Electronics.com

Purchase and inquiry

Manufacturer Product Number:	Manufacturer:
D6T-1A-02	Omron Electronics Inc-EMC Div
Series:	Product Status:
D6T	Active
Sensor Type:	Sensing Temperature - Local:
Digital, Local	-40°C ~ 80°C
Sensing Temperature - Remote:	Output Type:
-	I2C
Voltage - Supply:	Resolution:
4.5V ~ 5.5V	-
Features:	Accuracy - Highest (Lowest):
-	-
Test Condition:	Operating Temperature:
-	-40°C ~ 80°C
Mounting Type:	Package / Case:
User Defined	Module
Supplier Device Package:	Base Product Number:
Module	D6T-1A

Environmental & Export classification

|	
RoHS Status:	Moisture Sensitivity Level (MSL):
RoHS Compliant	1 (Unlimited)
REACH Status:	ECCN:
REACH Unaffected	EAR99
HTSUS:	
9025.19.8085	

OMRON

D6T
MEMS Thermal Sensors

Contactless measurement with OMRON D6T Thermal Sensors Able to detect the slightest temperature changes

Contactless Measurement OMRON MEMS Thermal Sensors are able to detect the slightest temperature changes

MEMS Thermal (IR sensor) measures the surface temperature of objects without touching them when the thermopile element absorbs the amount of radiant energy from the object.
1 Low noise

World's highest-class stable temperature output*

*According to OMRON's research as of February 2021,
except for D6T-32L-01A.

2 Easy connection

Direct temperature value output allows easy software design

3 Number of elements and temperature lineup

Variation of the number of elements (1 to 1024) x temperature range (-40 to 200°C)

1

High Precision

World's highest-class stable temperature output*

***According to OMRON's research as of February 2021, except for D6T-32L-01A.**

Past problem

Output was unstable in applications requiring high precision

▶

Solution!

Stable temperature output

OMRON D6T-1A-01

Stable output

Sensor Output Temperature [°C] vs Time [s]

Standard Equivalent Product

Output fluctuation

Sensor Output Temperature [°C] vs Time [s]
Note 1. According to OMRON's evaluation method (30-second continuous measurement with a blackbody furnace at 25°C)

Note 2. However, product specifications are not guaranteed.

-High Precision- Why?

Achieves the world's highest level*2 of SNR*1 by combining the in-house designed and manufactured ASIC and MEMS

In-house manufactured ASIC
✕

In-house manufactured MEMS

OMRON designs and manufactures both ASIC and MEMS thermopiles in-house. OMRON's unique digital filter and process optimization reduce the noise of ASIC, achieving the world's highest-level SNR.

*1 SNR: Signal-to-Noise Ratio. Compares the level of a signal to the level of background noise.

*2 According to OMRON's research as of February 2021, except for D6T-32L-01A.

Product Structure

OMRON's unique MEMS technology allows combining thermopile elements and ASICs into one package, resulting in ultra-compact footprint and high precision.

Infrared ray

Silicon lens
far-infrared focusing

▼

MEMS thermopile
Electromotive force occurrence

▼

ASIC
Low noise amplifier

▼

MCU
A/D conversion, calculation, I2C and I/F

Detect wavelengths in the range 8-12 μm

☐**MEMS thermopile detection principle**

Cold junction   Infrared ray (IR)   Cold junction
Si   Hot junction

The sensor utilizes the seebeck effect in which thermoelectric force is generated due to the temperature difference that occurs across the junction points of two different types of metal.
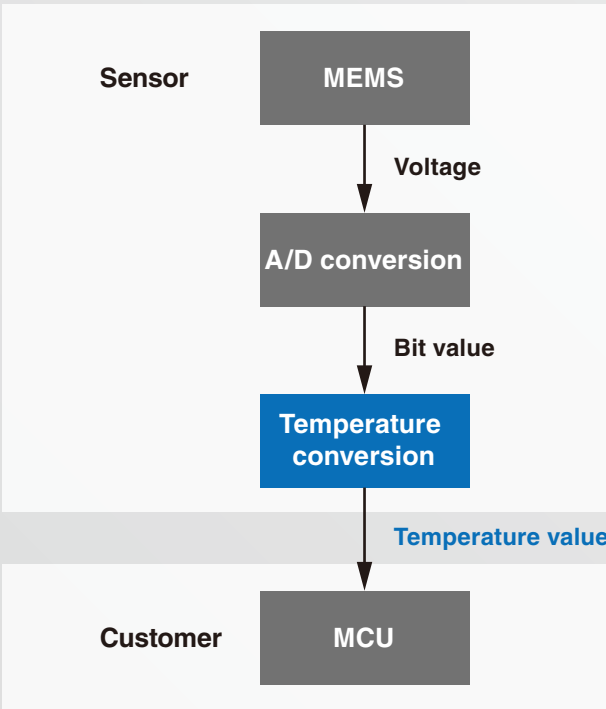

2 Easy connection

### Direct temperature value output allows easy software design

OMRON D6T	CAN packaged thermal sensor from a competitor

Provision of Development Support Tool

MEMS thermal sensors can be connected to **OMRON sensor evaluation boards**.
The below 3 types of platform are applicable. Evaluation can be performed easily by connecting thermal sensor, evaluation board, and harness to the platform.

Sensor	Harness for Connection	Evaluation Board	Platform	Sample Code
D6T	2JCIE-HARNESS-01	2JCIE-EV01-RP1	Raspberry Pi [1]	https://github.com/omron-devhub/d6t-2jcieev01-raspberrypi
		2JCIE-EV01-AR1	Arduino [2]	https://github.com/omron-devhub/d6t-2jcieev01-arduino
		2JCIE-EV01-FT1	ESP32 Feather [3]	https://github.com/omron-devhub/d6t-2jcieev01-arduino

6

3 Number of elements and temperature lineup

Variation of the number of elements (1 to 1024) and the temperature range (-40 to 200°C)
Example Applications

The sensors can be used in a wide range of applications, depending on the temperature measurement range.

-40°C

Refrigerator Interior & Room Temperature Detection

Able to detect temperature from a long distance

Home appliances (refrigerators & air conditioners)

Recommended Models

	1×1
	1×8
	4×4
	32×32

Human Presence Detection

Able to detect stationary human presence

Air conditioners & lighting systems

Recommended Models

	1×1
	1×8
	4×4
	32×32

Screening of Humans with Fever

Contributes to automated non-contact temperature detection

36.2°C OK!
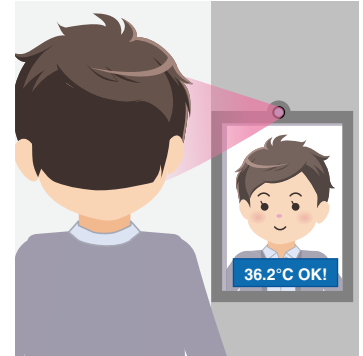

Room-Entry Management Equipment

Recommended Models

	1×1
	1×8
	4×4
	32×32

## ● 200°C

Abnormal
High Temperature
Monitoring

Contributes to prevention
of fires due to overheating

Transformers & distribution boards

---

Recommended Models

1×1

1×8

4×4

32×32

Comparison with Pyroelectric Sensor

Both the pyroelectric sensor and non-contact MEMS thermal sensor can detect even the slightest amount of radiant energy from objects such as infrared radiation and convert them into temperature readings. However, unlike pyroelectric sensor that relies on motion detection, non-contact MEMS thermal sensor is able to detect the presence of stationary humans (or objects).
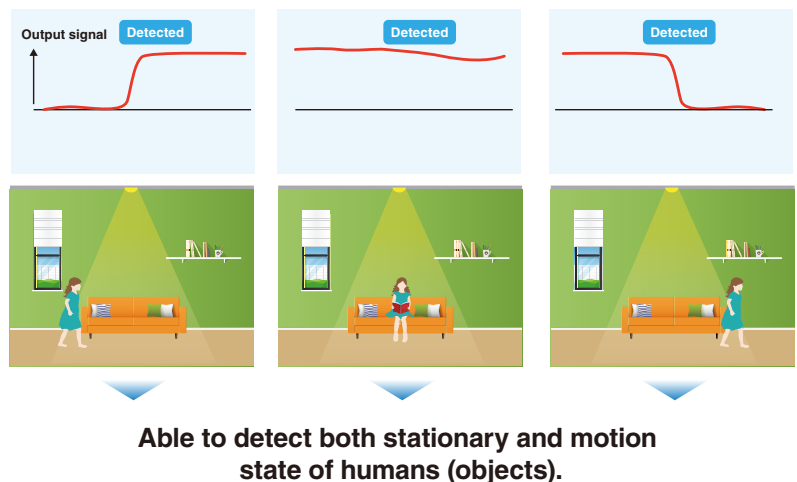

Pyroelectric sensor

Converts temperature readings only when detecting "temperature changes in the radiant energy" in its field of view.

Output signal

Detected | Undetected | Detected

Able to detect human (object) motion | **Unable to detect stationary human (object) presence** | **Able to detect human (object) motion**
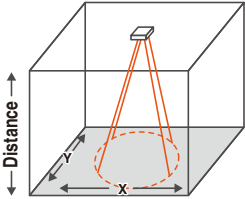

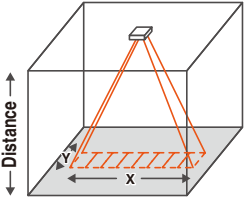

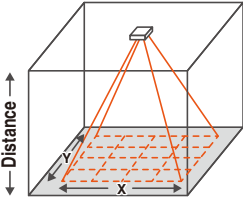

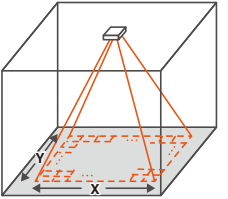

MEMS thermal sensor (thermopile)

Converts temperature readings by "continuously detecting the temperature of radiant energy" in its field of view

Output signal Detected | Detected | Detected

Able to detect both stationary and motion state of humans (objects).

Viewing Angle and Measurement Area

Choose your preferred sensor viewing angle to meet your application needs.

Model	D6T-1A-01	D6T-1A-02	D6T-8L-09	D6T-8L-09H	D6T-44L-06	D6T-44L-06H	D6T-32L-01A
Appearance

MEMS Thermal Sensors

Safety Precautions

Precautions for Correct Use

● Installation

- The sensor may not achieve the characteristics given in this datasheet due to the ambient environment or installation location. Before using the Sensor, please acquire an adequate understanding and make a prior assessment of Sensor characteristics in your actual system.

● Operating Environment

- Do not use the Sensor in locations where dust, dirt, oil, and other foreign matter will adhere to the lens. This may prevent correct temperature measurements.
- Do not use the Sensor in any of the following locations.
  - Locations where the Sensor may come into contact with water or oil
  - Outdoors
  - Locations subject to direct sunlight.
  - Locations subject to corrosive gases (in particular, chloride, sulfide, or ammonia gases).
  - Locations subject to extreme temperature changes
  - Locations subject to icing or condensation.
 - Locations subject to excessive vibration or shock.

● Noise Countermeasures

- The Sensor does not contain any protective circuits. Never subject it to an electrical load that exceeds the absolute maximum ratings for even an instance. The circuits may be damaged. Install protective circuits as required so that the absolute maximum ratings are not exceeded.
- Keep as much space as possible between the Sensor and devices that generates high frequencies (such as high-frequency welders and high-frequency sewing machines) or surges.
- Attach a surge protector or noise filter on nearby noise-generating devices (in particular, motors, transformers, solenoids, magnetic coils, or devices that have an inductance component).
- In order to prevent inductive noise, separate the connector of the Sensor from power lines carrying high voltages or large currents. Using a shielded line is also effective.
- If a switching regulator is used, check that malfunctions will not occur due to switching noise from the power supply.

● Handling

- This Sensor is a precision device. Do not drop it or subject it to excessive shock or force. Doing so may damage the Sensor or change its characteristics. Never subject the connector to unnecessary force. Do not use a Sensor that has been dropped.
- Take countermeasures against static electricity before you handle the Sensor.
- Turn OFF the power supply to the system before you install the Sensor. Working with the Sensor while the power supply is turned ON may cause malfunctions.
- Secure the Sensor firmly so that the optical axis does not move.
- Install the Sensor on a flat surface. If the installation surface is not even, the Sensor may be deformed, preventing correct measurements.
- Do not install the Sensor with screws. Screws may cause the resist to peel from the board. Secure the Sensor in a way that will not cause the resist to peel.
- Always check operation after you install the Sensor.
- Use the specified connector (GHR-04 from JST) and connect it securely so that it will not come off. If you solder directly to the connector terminals, the Sensor may be damaged.
- Make sure to wire the polarity of the terminals correctly. Incorrect polarity may damage the Sensor.
- Never attempt to disassemble the Sensor.
- Do not use the cable harness to the other product.
