DiGi Electronics Part Number	ICS513MLF-DG
Manufacturer	Renesas Electronics Corporation
Manufacturer Product Number	ICS513MLF
Description	IC CLOCK GENERATOR 8SOIC
Detailed Description	Clock Generator, Fanout Distribution IC 140MHz 1 8 -SOIC (0.154", 3.90mm Width)

This model ICS513MLF is available at DiGi Electronics.

Manufacturer Product Number:

ICS513MLF

Series:

LOCO™

DiGi-Electronics Programmable:

Not Verified

PLL:

Yes with Bypass

Output:

CMOS

Ratio - Input:Output:

1:2

Frequency - Max:

140MHz

Voltage - Supply:

3V ~ 5.5V

Mounting Type:

Surface Mount

Supplier Device Package:

8-SOIC

Manufacturer:

Renesas Electronics Corporation

Product Status:

Obsolete

Type:

Clock Generator, Fanout Distribution

Input:

Clock, Crystal

Number of Circuits:

1

Differential - Input:Output:

No/No

Divider/Multiplier:

No/Yes

Operating Temperature:

0°C ~ 70°C

Package / Case:

8-SOIC (0.154", 3.90mm Width)

Base Product Number:

ICS513

LOCO™ PLL CLOCK GENERATOR

ICS513

Description

The ICS513 LOCO™ is the most cost effective way to generate a high quality, high frequency clock output from a 14.31818 MHz crystal or clock input. The name LOCO stands for Low Cost Oscillator, as it is designed to replace crystal oscillators in most electronic systems. Using Phase-Locked-Loop (PLL) techniques, the device uses a standard, inexpensive crystal to produce output clocks up to 100 MHz.

Stored in the chip's ROM is the ability to generate five different output frequencies, allowing one chip to work in different speed processor systems.

The device also has a power-down mode that turns off the clock outputs when both select pins are low. In this mode, the internal PLL is not running.

Features

- Packaged as 8-pin SOIC or die
- Pb (lead) free package
- IDT's lowest cost PLL clock plus reference
- Produces common computer frequencies
- Input crystal frequency typically 14.3182 MHz
- Output clock frequencies up to 100 MHz from a 14.3182 MHz crystal or input clock
- Low jitter of 40 ps (one sigma)
- Compatible with all popular CPUs
- Duty cycle of 45/55 up to 200 MHz
- Custom frequencies available
- Operating voltage of 3.3 V to 5.5 V
- Power-down mode turns off chip
- 25 mA drive capability at TTL levels
- Advanced, low-power CMOS process

Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1	X1/ICLK	Input	Crystal connection to a 14.31818 MHz crystal or clock input.
2	VDD	Power	Connect to +3.3 V or +5 V.
3	GND	Power	Connect to ground.
4	REF	Output	Reference 14.31818 MHz crystal oscillator buffered clock output.
5	CLK	Output	Clock output per table above.
6	S0	Tri-level Input	Select 0 for output clock. Connect to GND or VDD or float. See table above.
7	S1	Tri-level Input	Select 1 for output clock. Connect to GND or VDD or float. See table above.
8	X2	Output	Crystal connection to a 14.31818 MHz crystal. Leave unconnected for clock input.

External Components

Decoupling Capacitor

As with any high-performance mixed-signal IC, the ICS513 must be isolated from system power supply noise to perform optimally.

A decoupling capacitor of 0.01 μ F must be connected between VDD and the GND. It must be connected close to the ICS513 to minimize lead inductance. No external power supply filtering is required for the ICS513.

Series Termination Resistor

A 33 Ω terminating resistor can be used next to the CLK and REF pins for trace lengths over one inch.

Crystal Load Capacitors

The total on-chip capacitance is approximately 12 pF. A parallel resonant, fundamental mode crystal should be used. The device crystal connections should include pads for small capacitors from X1 to ground and from

X2 to ground. These capacitors are used to adjust the stray capacitance of the board to match the nominally required crystal load capacitance. Because load capacitance can only be increased in this trimming process, it is important to keep stray capacitance to a minimum by using very short PCB traces (and no vias) between the crystal and device. Crystal capacitors, if needed, must be connected from each of the pins X1 and X2 to ground.

The value (in pF) of these crystal caps should equal $(C_L - 12 \text{ pF}) * 2$. In this equation, C_L = crystal load capacitance in pF. Example: For a crystal with a 16 pF load capacitance, each crystal capacitor would be 8 pF $[(16 - 12) * 2] = 8$.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS513. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.
