74AC174 • 74ACT174
Hex D-Type Flip-Flop with Master Reset

General Description

The AC/ACT174 is a high-speed hex D-type flip-flop. The device is used primarily as a 6-bit edge-triggered storage register. The information on the D inputs is transferred to storage during the LOW-to-HIGH clock transition. The device has a Master Reset to simultaneously clear all flip-flops.

Features

- I_{CC} reduced by 50%
- Outputs source/sink 24 mA
- ACT174 has TTL-compatible inputs

Functional Description

The AC/ACT174 consists of six edge-triggered D-type flip-flops with individual D inputs and Q outputs. The Clock (CP) and Master Reset ($\overline{MR}$) are common to all flip-flops. Each D input's state is transferred to the corresponding flip-flop's output following the LOW-to-HIGH Clock (CP) transition. A LOW input to the Master Reset ($\overline{MR}$) will force all outputs LOW independent of Clock or Data inputs. The AC/ACT174 is useful for applications where the true output only is required and the Clock and Master Reset are common to all storage elements.
