### Octal D-Type Flip-Flop with Clock Enable

#### General Description

The AC/ACT377 has eight edge-triggered, D-type flip-flops with individual D inputs and Q outputs. The common buffered Clock (CP) input loads all flip-flops simultaneously, when the Clock Enable ( $\overline{CE}$ ) is LOW.

The register is fully edge-triggered. The state of each D input, one setup time before the LOW-to-HIGH clock transition, is transferred to the corresponding flip-flop's Q output. The  $\overline{CE}$  input must be stable only one setup time prior to the LOW-to-HIGH clock transition for predictable operation.

#### Features

- $I_{CC}$  reduced by 50%
- Ideal for addressable register applications
- Clock enable for address and data synchronization applications
- Eight edge-triggered D-type flip-flops
- Buffered common clock
- Outputs source/sink 24 mA
- See 273 for master reset version
- See 373 for transparent latch version
- See 374 for 3-STATE version
- ACT377 has TTL-compatible inputs
