### MC74HC138A, MC74HCT138A

The MC74HC138A/MC74HCT138A is identical in pinout to the LS138. The MC74HC138A inputs are compatible with standard CMOS outputs; with pullup resistors, they are compatible with LSTTL outputs. The MC74HCT138A may be used as a level converter for interfacing TTL or NMOS outputs to High Speed CMOS inputs.

The device decodes a three-bit Address to one-of-eight active-low outputs. This device features three Chip Select inputs, two active-low and one active-high to facilitate the demultiplexing, cascading, and chip-selecting functions. The demultiplexing function is accomplished by using the Address inputs to select the desired device output; one of the Chip Selects is used as a data input while the other Chip Selects are held in their active states.

#### **Features**

- Output Drive Capability: 10 LSTTL Loads
- Outputs Directly Interface to CMOS, NMOS and TTL

#### **PIN DESCRIPTIONS**

#### **ADDRESS INPUTS**

#### A0, A1, A2 (Pins 1, 2, 3)

Address inputs. These inputs, when the chip is selected, determine which of the eight outputs is active—low.

#### **CONTROL INPUTS**

#### CS1, CS2, CS3 (Pins 6, 4, 5)

Chip select inputs. For CS1 at a high level and CS2, CS3 at a low level, the chip is selected and the outputs follow the

Address inputs. For any other combination of CS1, CS2, and CS3, the outputs are at a logic high.

#### **OUTPUTS**

#### Y0 - Y7 (Pins 15, 14, 13, 12, 11, 10, 9, 7)

Active-low Decoded outputs. These outputs assume a low level when addressed and the chip is selected. These outputs remain high when not addressed or the chip is not selected.
