2.5 V / 3.3 V Differential 4:1 Mux Input to 1:2 LVPECL Clock/Data Fanout / Translator

Multi−Level Inputs w/ Internal Termination

NB7L572

The NB7L572 is a high performance differential 4:1 Clock/Data input multiplexer and a 1:2 LVPECL Clock/Data fanout buffer. The INx/$\overline{\text{INx}}$ inputs includes internal 50 Ω termination resistors and will accept differential LVPECL, CML, or LVDS logic levels. The NB7L572 incorporates a pair of Select pins that will choose one of four differential inputs and will produce two identical LVPECL output copies of Clock or Data operating up to 7 GHz or 10 Gb/s, respectively. As such, NB7L572 is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock/Data distribution applications.

The NB7L572 INx/$\overline{\text{INx}}$ inputs, outputs and core logic are powered by a 2.5 V ±5% V or 3.3 V ±10% power supply. The two differential LVPECL outputs will swing 750 mV when externally terminated with a 50 Ω resistor to V_{CC} − 2 V, and are optimized for low skew and minimal jitter.

The NB7L572 is offered in a low profile 5x5 mm 32-pin QFN Pb-free package. Application notes, models, and support documentation are available at www.onsemi.com.

The NB7L572 is a member of the GigaComm™ family of high performance clock products.
