Semtech's backplane and linecard signal conditioners are ideal for small form factor modules or dense backplane / linecard applications.

FULL PORTFOLIO

Semtech products offer solutions for Ethernet, Infiniband, Fibre Channel and PCI Express. Solutions are available with and without CDR functionality.

DRIVE LONG BACKPLANES OR CABLES

A combination of Equalizer, DFE and ClearEdge® CDR technology allows for an optimal solution to drive long, dense backplanes or cables at high speeds.

LOW POWER

Semtech's ClearEdge® CDR products require the lowest power in the industry, a key factor as densities increase.

RESET THE JITTER AND CROSSTALK BUDGETS

Using CDRs reset jitter budgets, substantially increasing the robustness of the system and allowing for design flexibility. Using CDRs in multi-channel systems will also reset crosstalk budgets, an increasing concern at higher data rates.

ROSAs

Best-in-class receive optical sub-assemblies (ROSAs) based on patented Rchip technology.

Semtech's complete line of PIN and APD ROSA products spans 1310nm nanometer (nm) to 1550nm including limiting, linear and automatic gain control (AGC) functionality. Our PIN ROSAs operate at $+3.3V \pm 10\%$ and from $-40^{\circ}C$ to $+85^{\circ}C$, with highly accurate RSSI functionality and industry best dynamic range. The ROSA products feature patented Rchip technology packaged in a fully compliant SC or LC type optical subassembly and are available with optional flex circuits.

Super high gain Rchip ROSAs deliver $35k\Omega$ of gain that eliminates the cost and power of the limiting amplifier for SFP+ applications.

Optical Module Reference Design Kits

Improve the performance and time to market of your SFP+ design with Semtech Optical Module Reference Design Kits.

FAST TIME-TO-MARKET

Semtech's Reference Design Kits offer training through schematics, layout files and a design guide, as well as prompt support from our experienced applications engineers, reducing both design costs and time to market. This type of system is currently executed in the FTTx market, as the ability to reuse the 10G symmetric SFP+ design to address the 10G asymmetric market is incorporated.

BROAD RANGE OF REFERENCE DESIGNS AVAILABLE

Reference Design Kits are offered to cover a wide variety of SFP+ applications, including symmetrical and asymmetrical PON, and 10GbE SR and LR applications.

For Ethernet SFP+, designs are available for both the traditional architecture (including a LA in the receive chain), as well as a new LA-free architecture enabled by Semtech's High Gain ROSA portfolio.
