Purchase and inquiry

Manufacturer Product Number:

EFM8UB10F16G-C-QFN20

Series:

Universal Bee

DiGi-Electronics Programmable:

Not Verified

Core Size:

8-Bit

Connectivity:

I2C, SMBus, SPI, UART/USART, USB

Number of I/O:

13

Program Memory Type:

FLASH

RAM Size:

2.25K x 8

Data Converters:

A/D 11x12b

Operating Temperature:

-40°C ~ 85°C (TA)

Supplier Device Package:

20-QFN (3x3)

Base Product Number:

EFM8UB10

Manufacturer:

Silicon Labs

Product Status:

Active

Core Processor:

CIP-51 8051

Speed:

50MHz

Peripherals:

Brown-out Detect/Reset, POR, PWM, WDT

Program Memory Size:

16KB (16K x 8)

EEPROM Size:

-

Voltage - Supply (Vcc/Vdd):

1.71V ~ 3.6V

Oscillator Type:

Internal

Mounting Type:

Surface Mount

Package / Case:

20-WFQFN Exposed Pad

Environmental & Export classification

RoHS Status:

ROHS3 Compliant

REACH Status:

REACH Unaffected

HTSUS:

8542.31.0001

Moisture Sensitivity Level (MSL):

2 (1 Year)

ECCN:

3A991A2

EFM8 Universal Bee Family

EFM8UB1 Data Sheet

The EFM8UB1, part of the Universal Bee family of MCUs, is a multi-purpose line of 8-bit microcontrollers with USB feature set in small packages.

These devices offer high value by integrating an innovative energy-smart USB peripheral interface, charger detect circuit, 8 kV ESD protection, and enhanced high speed communication interfaces into small packages, making them ideal for space-constrained USB applications. With an efficient 8051 core and precision analog, the EFM8UB1 family is also optimal for embedded applications.

EFM8UB1 applications include the following:

- USB I/O controls, dongles
- High-speed communication bridge
- Consumer electronics
- Medical equipment

KEY FEATURES

- Pipelined 8-bit C8051 core with 50 MHz maximum operating frequency
- Up to 22 multifunction, 5 V tolerant I/O pins
- Low Energy USB with full- and low-speed support saves up to 90% of the USB energy
- USB charger detect circuit (USB-BCS 1.2 compliant)
- One 12-bit ADC and two analog comparators with internal voltage DAC as reference input
- Five 16-bit timers
- Two UARTs, SPI, SMBus/I2C master/slave and I2C slave
- Priority crossbar for flexible pin mapping

Lowest power mode with peripheral operational:

Normal
 Idle
 Suspend
 Snooze
 Shutdown

1. Feature List

The EFM8UB1 highlighted features are listed below.

- **Core**
 - Pipelined CIP-51 Core
 - Fully compatible with standard 8051 instruction set
 - 70% of instructions execute in 1-2 clock cycles
 - 50 MHz maximum operating frequency
- **Memory**
 - Up to 16 KB flash memory, in-system re-programmable from firmware, including 1 KB of 64-byte sectors and 15 KB of 512-byte sectors.
 - Up to 2304 bytes RAM (including 256 bytes standard 8051 RAM, 1024 bytes on-chip XRAM, and 1024 bytes of USB buffer)
- **Power**
 - 5 V-input LDO regulator for direct connection to USB supply
 - Internal LDO regulator for CPU core voltage
 - Power-on reset circuit and brownout detectors
- **I/O: Up to 22 total multifunction I/O pins**
 - All pins 5 V tolerant under bias
 - Flexible peripheral crossbar for peripheral routing
 - 5 mA source, 12.5 mA sink allows direct drive of LEDs
- **Clock Sources**
 - Internal 48 MHz oscillator with accuracy of $\pm 1.5\%$ stand-alone and $\pm 0.25\%$ using USB clock recovery
 - Internal 24.5 MHz oscillator with $\pm 2\%$ accuracy
 - Internal 80 kHz low-frequency oscillator
 - External CMOS clock option
- **Timers/Counters and PWM**
 - 3-channel Programmable Counter Array (PCA) supporting PWM, capture/compare, and frequency output modes
 - 5 x 16-bit general-purpose timers
 - Independent watchdog timer, clocked from the low frequency oscillator
- **Communications and Digital Peripherals**
 - USB 2.0-compliant full speed with integrated low-power transceiver, 4 bidirectional endpoints, and dedicated 1 KB buffer
 - 2 x UART, up to 3 Mbaud
 - SPI™ Master / Slave, up to 12 Mbps
 - SMBus™/I2C™ Master / Slave, up to 400 kbps
 - I2C High-Speed Slave, up to 3.4 Mbps
 - 16-bit CRC unit, supporting automatic CRC of flash at 256-byte boundaries
- **Analog**
 - 12-Bit Analog-to-Digital Converter (ADC)
 - 2 x Low-current analog comparators with adjustable reference
- **On-Chip, Non-Intrusive Debugging**
 - Full memory and register inspection
 - Four hardware breakpoints, single-stepping
- **Pre-loaded USB bootloader**
- **Temperature range -40 to 85 °C**
- **Single power supply of 2.2 to 3.6 V or 3.0 to 5.25 V**
- **QSOP24, QFN28, and QFN20 packages**

With on-chip power-on reset, voltage supply monitor, watchdog timer, and clock oscillator, the EFM8UB1 devices are truly standalone system-on-a-chip solutions. The flash memory is reprogrammable in-circuit, providing nonvolatile data storage and allowing field upgrades of the firmware. The on-chip debugging interface (C2) allows non-intrusive (uses no on-chip resources), full speed, in-circuit debugging using the production MCU installed in the final application. This debug logic supports inspection and modification of memory and registers, setting breakpoints, single stepping, and run and halt commands. All analog and digital peripherals are fully functional while debugging. The on-chip 5V-to-3.3V regulator enables operation from 2.2 V up to a 5.25 V supply. Devices are available in 28-pin QFN, 20-pin QFN, or 24-pin QSOP packages. All package options are lead-free and RoHS compliant.

2. Ordering Information

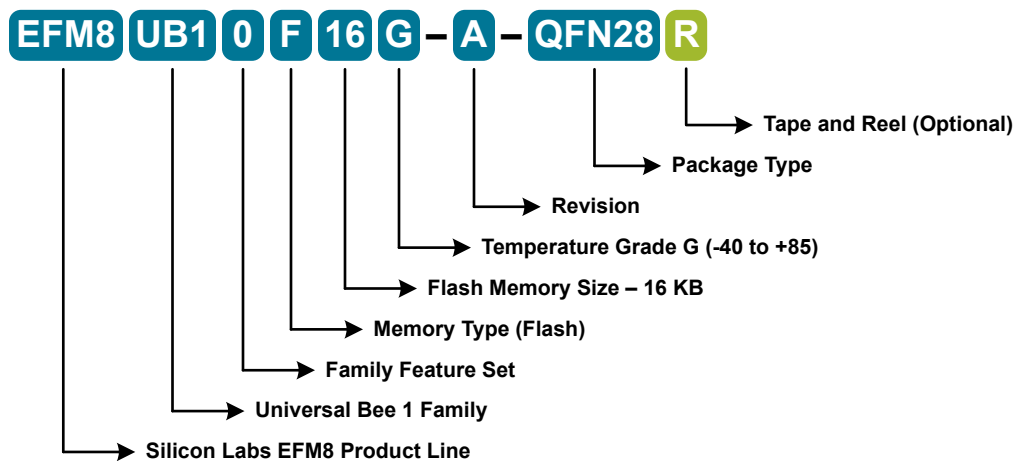

Figure 2.1. EFM8UB1 Part Numbering

All EFM8UB1 family members have the following features:

- CIP-51 Core running up to 50 MHz
- Three Internal Oscillators (48 MHz, 24.5 MHz and 80 kHz)
- USB Full/Low speed Function Controller
- SMBus
- I2C Slave
- SPI
- 2 UARTs
- 3-Channel Programmable Counter Array (PWM, Clock Generation, Capture/Compare)
- 5 16-bit Timers
- 2 Analog Comparators
- 12-bit Analog-to-Digital Converter with integrated multiplexer, voltage reference, and temperature sensor
- 16-bit CRC Unit
- Pre-loaded USB bootloader

In addition to these features, each part number in the EFM8UB1 family has a set of features that vary across the product line. The product selection guide shows the features available on each family member.

Table 2.1. Product Selection Guide

| Ordering Part Number | Flash Memory (kB) | RAM (Bytes) | Digital Port I/Os (Total) | ADC0 Channels | Comparator 0 Inputs | Comparator 1 Inputs | Pb-free (RoHS Compliant) | Separate VIO and VDD Pins | Temperature Range | Package |

3. System Overview

3.1 Introduction

Figure 3.1. Detailed EFM8UB1 Block Diagram

This section describes the EFM8UB1 family at a high level.

For more information on the device packages and pinout, electrical specifications, and typical connection diagrams, see the EFM8UB1 Data Sheet. For more information on each module including register definitions, see the EFM8UB1 Reference Manual. For more information on any errata, see the EFM8UB1 Errata.

3.2 Power

All internal circuitry draws power from the VDD supply pin. External I/O pins are powered from the VIO supply voltage (or VDD on devices without a separate VIO connection), while most of the internal circuitry is supplied by an on-chip LDO regulator. Control over the device power can be achieved by enabling/disabling individual peripherals as needed. Each analog peripheral can be disabled when not in use and placed in low power mode. Digital peripherals, such as timers and serial buses, have their clocks gated off and draw little power when they are not in use.

Table 3.1. Power Modes

| Power Mode | Details | Mode Entry | Wake-Up Sources |
|------------|---|---|---|
| Normal | Core and all peripherals clocked and fully operational | — | — |
| Idle | <ul style="list-style-type: none"> Core halted All peripherals clocked and fully operational Code resumes execution on wake event | Set IDLE bit in PCON0 | Any interrupt |
| Suspend | <ul style="list-style-type: none"> Core and peripheral clocks halted HFOSC0 and HFOSC1 oscillators stopped Regulators in normal bias mode for fast wake Timer 3 and 4 may clock from LFOSC0 Code resumes execution on wake event | <ol style="list-style-type: none"> Switch SYSCLK to HFOSC0 Set SUSPEND bit in PCON1 | <ul style="list-style-type: none"> USB0 Bus Activity Timer 4 Event SPI0 Activity I2C0 Slave Activity Port Match Event Comparator 0 Falling Edge |
| Stop | <ul style="list-style-type: none"> All internal power nets shut down 5V regulator remains active (if enabled) Internal 1.8 V LDO on Pins retain state Exit on any reset source | <ol style="list-style-type: none"> Clear STOPCF bit in REG0CN Set STOP bit in PCON0 | Any reset source |
| Snooze | <ul style="list-style-type: none"> Core and peripheral clocks halted HFOSC0 and HFOSC1 oscillators stopped Regulators in low bias current mode for energy savings Timer 3 and 4 may clock from LFOSC0 Code resumes execution on wake event | <ol style="list-style-type: none"> Switch SYSCLK to HFOSC0 Set SNOOZE bit in PCON1 | <ul style="list-style-type: none"> USB0 Bus Activity Timer 4 Event SPI0 Activity I2C0 Slave Activity Port Match Event Comparator 0 Falling Edge |
| Shutdown | <ul style="list-style-type: none"> All internal power nets shut down 5V regulator remains active (if enabled) Internal 1.8 V LDO off to save energy Pins retain state Exit on pin or power-on reset | <ol style="list-style-type: none"> Set STOPCF bit in REG0CN Set STOP bit in PCON0 | <ul style="list-style-type: none"> RSTb pin reset Power-on reset |

3.3 I/O

Digital and analog resources are externally available on the device's multi-purpose I/O pins. Port pins P0.0-P2.3 can be defined as general-purpose I/O (GPIO), assigned to one of the internal digital resources through the crossbar or dedicated channels, or assigned to an analog function. Port pins P3.0 and P3.1 can be used as GPIO. Additionally, the C2 Interface Data signal (C2D) is shared with P3.0.

The port control block offers the following features:

- Up to 22 multi-functions I/O pins, supporting digital and analog functions.
- Flexible priority crossbar decoder for digital peripheral assignment.
- Two drive strength settings for each port.
- Two direct-pin interrupt sources with dedicated interrupt vectors (INT0 and INT1).
- Up to 20 direct-pin interrupt sources with shared interrupt vector (Port Match).

3.4 Clocking

The CPU core and peripheral subsystem may be clocked by both internal and external oscillator resources. By default, the system clock comes up running from the 24.5 MHz oscillator divided by 8.

The clock control system offers the following features:

- Provides clock to core and peripherals.
- 24.5 MHz internal oscillator (HFOSC0), accurate to $\pm 2\%$ over supply and temperature corners.
- 48 MHz internal oscillator (HFOSC1), accurate to $\pm 1.5\%$ over supply and temperature corners.
- 80 kHz low-frequency oscillator (LFOSC0).
- External CMOS clock input (EXTCLK).
- Clock divider with eight settings for flexible clock scaling:
 - Divide the selected clock source by 1, 2, 4, 8, 16, 32, 64, or 128.
 - HFOSC0 and HFOSC1 include 1.5x pre-scalers for further flexibility.

3.5 Counters/Timers and PWM

Programmable Counter Array (PCA0)

The programmable counter array (PCA) provides multiple channels of enhanced timer and PWM functionality while requiring less CPU intervention than standard counter/timers. The PCA consists of a dedicated 16-bit counter/timer and one 16-bit capture/compare module for each channel. The counter/timer is driven by a programmable timebase that has flexible external and internal clocking options. Each capture/compare module may be configured to operate independently in one of five modes: Edge-Triggered Capture, Software Timer, High-Speed Output, Frequency Output, or Pulse-Width Modulated (PWM) Output. Each capture/compare module has its own associated I/O line (CEXn) which is routed through the crossbar to port I/O when enabled.

- 16-bit time base
- Programmable clock divisor and clock source selection
- Up to three independently-configurable channels
- 8, 9, 10, 11 and 16-bit PWM modes (center or edge-aligned operation)
- Output polarity control
- Frequency output mode
- Capture on rising, falling or any edge
- Compare function for arbitrary waveform generation
- Software timer (internal compare) mode
- Can accept hardware "kill" signal from comparator 0

Timers (Timer 0, Timer 1, Timer 2, Timer 3, and Timer 4)

Several counter/timers are included in the device: two are 16-bit counter/timers compatible with those found in the standard 8051, and the rest are 16-bit auto-reload timers for timing peripherals or for general purpose use. These timers can be used to measure time intervals, count external events and generate periodic interrupt requests. Timer 0 and Timer 1 are nearly identical and have four primary modes of operation. The other timers offer both 16-bit and split 8-bit timer functionality with auto-reload and capture capabilities.

Timer 0 and Timer 1 include the following features:

- Standard 8051 timers, supporting backwards-compatibility with firmware and hardware.
- Clock sources include SYSCLK, SYSCLK divided by 12, 4, or 48, the External Clock divided by 8, or an external pin.
- 8-bit auto-reload counter/timer mode
- 13-bit counter/timer mode
- 16-bit counter/timer mode
- Dual 8-bit counter/timer mode (Timer 0)

Timer 2, Timer 3 and Timer 4 are 16-bit timers including the following features:

- Clock sources for all timers include SYSCLK, SYSCLK divided by 12, or the External Clock divided by 8.
- LFOSC0 divided by 8 may be used to clock Timer 3 and Timer 4 in active or suspend/snooze power modes.
- Timer 4 is a low-power wake source, and can be chained together with Timer 3.
- 16-bit auto-reload timer mode.
- Dual 8-bit auto-reload timer mode.
- External pin capture.
- LFOSC0 capture.
- Comparator 0 capture.
- USB Start-of-Frame (SOF) capture.

Watchdog Timer (WDT0)

The device includes a programmable watchdog timer (WDT) running off the low-frequency oscillator. A WDT overflow forces the MCU into the reset state. To prevent the reset, the WDT must be restarted by application software before overflow. If the system experiences a software or hardware malfunction preventing the software from restarting the WDT, the WDT overflows and causes a reset. Following a reset, the WDT is automatically enabled and running with the default maximum time interval. If needed, the WDT can be disabled by system software or locked on to prevent accidental disabling. Once locked, the WDT cannot be disabled until the next system reset. The state of the RST pin is unaffected by this reset.

The Watchdog Timer has the following features:

- Programmable timeout interval
- Runs from the low-frequency oscillator
- Lock-out feature to prevent any modification until a system reset

3.6 Communications and Other Digital Peripherals

Universal Serial Bus (USB0)

The USB0 peripheral provides a full-speed USB 2.0 compliant device controller and PHY with additional Low Energy USB features. The device supports both full-speed (12MBit/s) and low speed (1.5MBit/s) operation, and includes a dedicated USB oscillator with clock recovery mechanism for crystal-free operation. No external components are required. The USB function controller (USB0) consists of a Serial Interface Engine (SIE), USB transceiver (including matching resistors and configurable pull-up resistors), and 1 KB FIFO block. The Low Energy Mode ensures the current consumption is optimized and enables USB communication on a strict power budget.

The USB0 module includes the following features:

- Full and Low Speed functionality.
- Implements 4 bidirectional endpoints.
- Low Energy Mode to reduce active supply current based on bus bandwidth.
- USB 2.0 compliant USB peripheral support (no host capability).
- Direct module access to 1 KB of RAM for FIFO memory.
- Clock recovery to meet USB clocking requirements with no external components.
- Charger detection circuitry with automatic detection of SDP, CDP, and DCP interfaces.
- D+ and D- can be routed to ADC input to support ACM and proprietary charger architectures.

Universal Asynchronous Receiver/Transmitter (UART0)

UART0 is an asynchronous, full duplex serial port offering modes 1 and 3 of the standard 8051 UART. Enhanced baud rate support allows a wide range of clock sources to generate standard baud rates. Received data buffering allows UART0 to start reception of a second incoming data byte before software has finished reading the previous data byte.

The UART module provides the following features:

- Asynchronous transmissions and receptions.
- Baud rates up to $\text{SYSCLK}/2$ (transmit) or $\text{SYSCLK}/8$ (receive).
- 8- or 9-bit data.
- Automatic start and stop generation.
- Single-byte FIFO on transmit and receive.

Universal Asynchronous Receiver/Transmitter (UART1)

UART1 is an asynchronous, full duplex serial port offering a variety of data formatting options. A dedicated baud rate generator with a 16-bit timer and selectable prescaler is included, which can generate a wide range of baud rates. A received data FIFO allows UART1 to receive multiple bytes before data is lost and an overflow occurs.

UART1 provides the following features:

- Asynchronous transmissions and receptions.
- Dedicated baud rate generator supports baud rates up to $\text{SYSCLK}/2$ (transmit) or $\text{SYSCLK}/8$ (receive).
- 5, 6, 7, 8, or 9 bit data.
- Automatic start and stop generation.
- Automatic parity generation and checking.
- Four byte FIFO on transmit and receive.
- Auto-baud detection.
- LIN break and sync field detection.
- CTS / RTS hardware flow control.

Serial Peripheral Interface (SPI0)

The serial peripheral interface (SPI) module provides access to a flexible, full-duplex synchronous serial bus. The SPI can operate as a main (clock driver) or secondary (clock receiver) interface in both 3-wire or 4-wire modes, and supports multiple main/secondary devices on a single SPI bus. The chip-select (NSS) signal can be configured as an input to select the SPI in secondary mode, or to disable main mode operation in an environment with multiple main interfaces, avoiding contention on the SPI bus when more than one main device attempts simultaneous data transfers. NSS can also be configured as a firmware-controlled chip-select output in main interface mode, or disabled to reduce the number of pins required. Additional general purpose port I/O pins can be used to select multiple secondary devices.

- Supports 3- or 4-wire main or secondary modes
- Supports external clock frequencies up to 12 Mbps in main or secondary mode
- Support for all clock phase and polarity modes
- 8-bit programmable clock rate (main)
- Programmable receive timeout (secondary)
- Four byte FIFO on transmit and receive
- Can operate in suspend or snooze modes and wake the CPU on reception of a byte
- Support for multiple mains on the same data lines

System Management Bus / I2C (SMB0)

The SMBus I/O interface is a two-wire, bi-directional serial bus. The SMBus is compliant with the System Management Bus Specification, version 1.1, and compatible with the I²C serial bus.

The SMBus module includes the following features:

- Standard (up to 100 kbps) and Fast (400 kbps) transfer speeds
- Support for leader, follower, and multi-leader modes
- Hardware synchronization and arbitration for multi-leader mode
- Clock low extending (clock stretching) to interface with faster leader devices
- Hardware support for 7-bit follower and general call address recognition
- Firmware support for 10-bit follower address decoding
- Ability to inhibit all follower states
- Programmable data setup/hold times
- Transmit and receive FIFOs (one byte) to help increase throughput in faster applications

I2C Slave (I2CSLAVE0)

The I2C Slave interface is a 2-wire, bidirectional serial bus that is compatible with the I2C Bus Specification 3.0. It is capable of transferring in high-speed mode (HS-mode) at speeds of up to 3.4 Mbps. Firmware can write to the I2C interface, and the I2C interface can autonomously control the serial transfer of data. The interface also supports clock stretching for cases where the core may be temporarily prohibited from transmitting a byte or processing a received byte during an I2C transaction. This module operates only as an I2C slave device.

The I2C module includes the following features:

- Standard (up to 100 kbps), Fast (400 kbps), Fast Plus (1 Mbps), and High-speed (3.4 Mbps) transfer speeds
- Support for slave mode only
- Clock low extending (clock stretching) to interface with faster masters
- Hardware support for 7-bit slave address recognition
- Transmit and receive FIFOs (two bytes) to help increase throughput in faster applications

16-bit CRC (CRC0)

The cyclic redundancy check (CRC) module performs a CRC using a 16-bit polynomial. CRC0 accepts a stream of 8-bit data and posts the 16-bit result to an internal register. In addition to using the CRC block for data manipulation, hardware can automatically CRC the flash contents of the device.

The CRC module is designed to provide hardware calculations for flash memory verification and communications protocols. The CRC module supports the standard CCITT-16 16-bit polynomial (0x1021), and includes the following features:

- Support for CCITT-16 polynomial
- Byte-level bit reversal
- Automatic CRC of flash contents on one or more 256-byte blocks
- Initial seed selection of 0x0000 or 0xFFFF

3.7 Analog

12-Bit Analog-to-Digital Converter (ADC0)

The ADC is a successive-approximation-register (SAR) ADC with 12-, 10-, and 8-bit modes, integrated track-and hold and a programmable window detector. The ADC is fully configurable under software control via several registers. The ADC may be configured to measure different signals using the analog multiplexer. The voltage reference for the ADC is selectable between internal and external reference sources.

- Up to 20 external inputs.
- Single-ended 12-bit and 10-bit modes.
- Supports an output update rate of 200 ksps samples per second in 12-bit mode or 800 ksps samples per second in 10-bit mode.
- Operation in low power modes at lower conversion speeds.
- Asynchronous hardware conversion trigger, selectable between software, external I/O and internal timer sources.
- Output data window comparator allows automatic range checking.
- Support for burst mode, which produces one set of accumulated data per conversion-start trigger with programmable power-on settling and tracking time.
- Conversion complete and window compare interrupts supported.
- Flexible output data formatting.
- Includes an internal fast-settling reference with two levels (1.65 V and 2.4 V) and support for external reference and signal ground.
- Integrated temperature sensor.

Low Current Comparators (CMP0, CMP1)

Analog comparators are used to compare the voltage of two analog inputs, with a digital output indicating which input voltage is higher. External input connections to device I/O pins and internal connections are available through separate multiplexers on the positive and negative inputs. Hysteresis, response time, and current consumption may be programmed to suit the specific needs of the application.

The comparator includes the following features:

- Up to 10 (CMP0) or 12 (CMP1) external positive inputs
- Up to 10 (CMP0) or 12 (CMP1) external negative inputs
- Additional input options:
 - Internal connection to LDO output
 - Direct connection to GND
 - Direct connection to VDD
 - Dedicated 6-bit reference DAC
- Synchronous and asynchronous outputs can be routed to pins via crossbar
- Programmable hysteresis between 0 and ± 20 mV
- Programmable response time
- Interrupts generated on rising, falling, or both edges
- PWM output kill feature

3.8 Reset Sources

Reset circuitry allows the controller to be easily placed in a predefined default condition. On entry to this reset state, the following occur:

- The core halts program execution.
- Module registers are initialized to their defined reset values unless the bits reset only with a power-on reset.
- External port pins are forced to a known state.
- Interrupts and timers are disabled.

All registers are reset to the predefined values noted in the register descriptions unless the bits only reset with a power-on reset. The contents of RAM are unaffected during a reset; any previously stored data is preserved as long as power is not lost. The Port I/O latches are reset to 1 in open-drain mode. Weak pullups are enabled during and after the reset. For Supply Monitor and power-on resets, the RSTb pin is driven low until the device exits the reset state. On exit from the reset state, the program counter (PC) is reset, and the system clock defaults to an internal oscillator. The Watchdog Timer is enabled, and program execution begins at location 0x0000.

Reset sources on the device include:

- Power-on reset
- External reset pin
- Comparator reset
- Software-triggered reset
- Supply monitor reset (monitors VDD supply)
- Watchdog timer reset
- Missing clock detector reset
- Flash error reset
- USB reset

3.9 Debugging

The EFM8UB1 devices include an on-chip Silicon Labs 2-Wire (C2) debug interface to allow flash programming and in-system debugging with the production part installed in the end application. The C2 interface uses a clock signal (C2CK) and a bi-directional C2 data signal (C2D) to transfer information between the device and a host system. See the C2 Interface Specification for details on the C2 protocol.

3.10 Bootloader

All devices come pre-programmed with a USB bootloader. This bootloader resides in the code security page and last pages of code flash; it can be erased if it is not needed.

The byte before the Lock Byte is the Bootloader Signature Byte. Setting this byte to a value of 0xA5 indicates the presence of the bootloader in the system. Any other value in this location indicates that the bootloader is not present in flash.

When a bootloader is present, the device will jump to the bootloader vector after any reset, allowing the bootloader to run. The bootloader then determines if the device should stay in bootload mode or jump to the reset vector located at 0x0000. When the bootloader is not present, the device will jump to the reset vector of 0x0000 after any reset.

Silicon Labs recommends the bootloader be disabled and the flash memory locked after the production programming step in applications where code security is a concern. More information about the factory bootloader protocol and usage can be found in *AN945: EFM8 Factory Bootloader User Guide*. Application notes can be found on the Silicon Labs website (www.silabs.com/8bit-appnotes) or within Simplicity Studio by using the [Application Notes] tile.

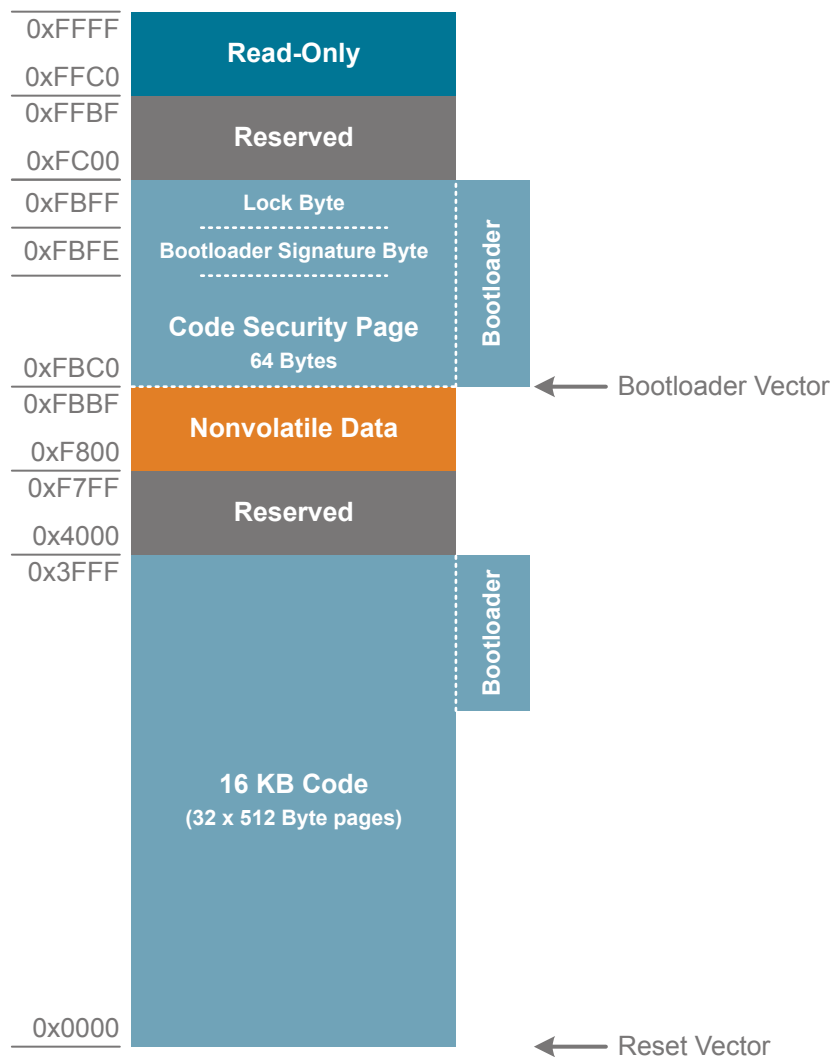

Figure 3.2. Flash Memory Map with Bootloader—16 KB Devices

Table 3.2. Summary of Pins for Bootloader Communication

| Bootloader | Pins for Bootload Communication |
|------------|---------------------------------|
| UART | TX – P0.4 |
| | RX – P0.5 |
| USB | VBUS |
| | D+ |
| | D- |

Table 3.3. Summary of Pins for Bootload Mode Entry

| Device Package | Pin for Bootload Mode Entry |
|----------------|-----------------------------|
| QFN28 | P3.0 / C2D |
| QSOP24 | P2.0 / C2D |
| QFN20 | P2.0 / C2D |

4. Electrical Specifications

4.1 Electrical Characteristics

All electrical parameters in all tables are specified under the conditions listed in [Table 4.1 Recommended Operating Conditions on page 17](#), unless stated otherwise.

4.1.1 Recommended Operating Conditions

Table 4.1. Recommended Operating Conditions

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|---------------------|----------------|------|-----|-----------------|------|
| Operating Supply Voltage on VDD ¹ | V _{DD} | | 2.2 | — | 3.6 | V |
| Operating Supply Voltage on VIO ³ | V _{IO} | | 1.71 | — | V _{DD} | V |
| Operating Supply Voltage on VREGIN | V _{REGIN} | | 3.0 | — | 5.25 | V |
| System Clock Frequency | f _{SYSCLK} | | 0 | — | 50 | MHz |
| Operating Ambient Temperature | T _A | | -40 | — | 85 | °C |

Note:

- Standard USB compliance tests require a minimum of 3.0 V on VDD for compliant operation.
- All voltages with respect to GND.
- On devices without a VIO pin, V_{IO} = V_{DD}.
- GPIO levels are undefined whenever VIO is less than 1 V.

4.1.2 Power Consumption

Table 4.2. Power Consumption

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|---------------------|--|-----|-----|------|------|
| Digital Core Supply Current | | | | | | |
| Normal Mode-Full speed with code executing from flash | I _{DD} | F _{SYSCLK} = 48 MHz (HFOSC1) ² | — | 9.4 | 10.1 | mA |
| | | F _{SYSCLK} = 24.5 MHz (HFOSC0) ² | — | 4.5 | 5.2 | mA |
| | | F _{SYSCLK} = 1.53 MHz (HFOSC0) ² | — | 600 | — | μA |
| | | F _{SYSCLK} = 80 kHz ³ | — | 145 | — | μA |
| Idle Mode-Core halted with peripherals running | I _{DD} | F _{SYSCLK} = 48 MHz (HFOSC1) ² | — | 6.3 | 6.8 | mA |
| | | F _{SYSCLK} = 24.5 MHz (HFOSC0) ² | — | 2.9 | 3.3 | mA |
| | | F _{SYSCLK} = 1.53 MHz (HFOSC0) ² | — | 440 | — | μA |
| | | F _{SYSCLK} = 80 kHz ³ | — | 130 | — | μA |
| Suspend Mode-Core halted and high frequency clocks stopped, Supply monitor off. | I _{DD} | LFO Running | — | 125 | — | μA |
| | | LFO Stopped | — | 120 | — | μA |
| Snooze Mode-Core halted and high frequency clocks stopped. Regulator in low-power state, Supply monitor off. | I _{DD} | LFO Running | — | 25 | — | μA |
| | | LFO Stopped | — | 20 | — | μA |
| Stop Mode—Core halted and all clocks stopped, Internal LDO On, Supply monitor off. | I _{DD} | | — | 120 | — | μA |
| Shutdown Mode—Core halted and all clocks stopped, Internal LDO Off, Supply monitor off. | I _{DD} | | — | 0.2 | — | μA |
| Analog Peripheral Supply Currents | | | | | | |
| High-Frequency Oscillator 0 | I _{HFOSC0} | Operating at 24.5 MHz, T _A = 25 °C | — | 105 | — | μA |
| High-Frequency Oscillator 1 | I _{HFOSC1} | Operating at 48 MHz, T _A = 25 °C | — | 850 | — | μA |
| Low-Frequency Oscillator | I _{LFOSC} | Operating at 80 kHz, T _A = 25 °C | — | 4 | — | μA |

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|---|---------------------|---|-----|------|------|------|
| ADC0 Always-on ⁴ | I _{ADC} | 800 ksps, 10-bit conversions or 200 ksps, 12-bit conversions Normal bias settings V _{DD} = 3.0 V | — | 820 | 1200 | μA |
| | | 250 ksps, 10-bit conversions or 62.5 ksps 12-bit conversions Low power bias settings V _{DD} = 3.0 V | — | 405 | 580 | μA |
| ADC0 Burst Mode, 10-bit single conversions, external reference | I _{ADC} | 200 ksps, V _{DD} = 3.0 V | — | 370 | — | μA |
| | | 100 ksps, V _{DD} = 3.0 V | — | 185 | — | μA |
| | | 10 ksps, V _{DD} = 3.0 V | — | 20 | — | μA |
| ADC0 Burst Mode, 10-bit single conversions, internal reference, Low power bias settings | I _{ADC} | 200 ksps, V _{DD} = 3.0 V | — | 485 | — | μA |
| | | 100 ksps, V _{DD} = 3.0 V | — | 245 | — | μA |
| | | 10 ksps, V _{DD} = 3.0 V | — | 25 | — | μA |
| ADC0 Burst Mode, 12-bit single conversions, external reference | I _{ADC} | 100 ksps, V _{DD} = 3.0 V | — | 505 | — | μA |
| | | 50 ksps, V _{DD} = 3.0 V | — | 255 | — | μA |
| | | 10 ksps, V _{DD} = 3.0 V | — | 50 | — | μA |
| ADC0 Burst Mode, 12-bit single conversions, internal reference | I _{ADC} | 100 ksps, V _{DD} = 3.0 V, Normal bias | — | 950 | — | μA |
| | | 50 ksps, V _{DD} = 3.0 V, Low power bias | — | 415 | — | μA |
| | | 10 ksps, V _{DD} = 3.0 V, Low power bias | — | 80 | — | μA |
| Internal ADC0 Reference, Always-on ⁵ | I _{VREFFS} | Normal Power Mode | — | 680 | 790 | μA |
| | | Low Power Mode | — | 170 | 210 | μA |
| Temperature Sensor | I _{TSENSE} | | — | 70 | 120 | μA |
| Comparator 0 (CMP0, CMP1) | I _{CMP} | CPMD = 11 | — | 0.5 | — | μA |
| | | CPMD = 10 | — | 3 | — | μA |
| | | CPMD = 01 | — | 8.5 | — | μA |
| | | CPMD = 00 | — | 22.5 | — | μA |
| Comparator Reference ⁶ | I _{CPREF} | | — | 1.2 | — | μA |
| Voltage Supply Monitor (VMON0) | I _{VMON} | | — | 15 | 20 | μA |

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|-----------------------|------------|---|-----|-----|-----|---------------|
| 5V Regulator | I_{VREG} | Normal Mode (SUSEN = 0, BIASENB = 0) | — | 245 | 340 | μA |
| | | Suspend Mode (SUSEN = 1, BIASENB = 0) | — | 60 | 100 | μA |
| | | Bias Disabled (BIASENB = 1) | — | 2.5 | 10 | μA |
| | | Disabled (BIASENB = 1, REG1ENB = 1) | — | 2.5 | — | nA |
| USB (USB0) Full-Speed | I_{USB} | Low Energy Mode, 64 byte 1ms IN Interrupt transfers | — | 850 | — | μA |
| | | Low Energy Mode, 64 byte 1ms OUT Interrupt transfers | — | 250 | — | μA |
| | | Low Energy Mode, Idle (SOF only) | — | 50 | — | μA |

Note:

1. Currents are additive. For example, where I_{DD} is specified and the mode is not mutually exclusive, enabling the functions increases supply current by the specified amount.
2. Includes supply current from internal LDO regulator, supply monitor, and High Frequency Oscillator.
3. Includes supply current from internal LDO regulator, supply monitor, and Low Frequency Oscillator.
4. ADC0 always-on power excludes internal reference supply current.
5. The internal reference is enabled as-needed when operating the ADC in burst mode to save power.
6. This value is the current sourced from the pin or supply selected as the full-scale reference to the comparator DAC.

4.1.3 Reset and Supply Monitor**Table 4.3. Reset and Supply Monitor**

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|------------|--|------|-------|------|---------------|
| VDD Supply Monitor Threshold | V_{VDDM} | | 1.95 | 2.05 | 2.15 | V |
| Power-On Reset (POR) Threshold | V_{POR} | Rising Voltage on VDD | — | 1.2 | — | V |
| | | Falling Voltage on VDD | 0.75 | — | 1.36 | V |
| VDD Ramp Time | t_{RMP} | Time to $V_{DD} > 2.2\text{ V}$ | 10 | — | — | μs |
| Reset Delay from POR | t_{POR} | Relative to $V_{DD} > V_{POR}$ | 3 | 10 | 31 | ms |
| Reset Delay from non-POR source | t_{RST} | Time between release of reset source and code execution | — | 50 | — | μs |
| RST Low Time to Generate Reset | t_{RSTL} | | 15 | — | — | μs |
| Missing Clock Detector Response Time (final rising edge to reset) | t_{MCD} | $F_{SYSCLK} > 1\text{ MHz}$ | — | 0.625 | 1.2 | ms |
| Missing Clock Detector Trigger Frequency | F_{MCD} | | — | 7.5 | 13.5 | kHz |
| VDD Supply Monitor Turn-On Time | t_{MON} | | — | 2 | — | μs |

4.1.4 Flash Memory

Table 4.4. Flash Memory

| Parameter | Symbol | Test Condition | Min | Typ | Max | Units |
|--|-------------|---|-----|------|-----|---------------|
| Write Time ^{1, 2} | t_{WRITE} | One Byte, $F_{SYSCLK} = 24.5 \text{ MHz}$ | 19 | 20 | 21 | μs |
| Erase Time ^{1, 2} | t_{ERASE} | One Page, $F_{SYSCLK} = 24.5 \text{ MHz}$ | 5.2 | 5.35 | 5.5 | ms |
| V_{DD} Voltage During Programming ³ | V_{PROG} | | 2.2 | — | 3.6 | V |
| Endurance (Write/Erase Cycles) | N_{WE} | | 20k | 100k | — | Cycles |
| CRC Calculation Time | t_{CRC} | One 256-Byte Block $SYSCLK = 48 \text{ MHz}$ | — | 5.5 | — | μs |

Note:

- Does not include sequencing time before and after the write/erase operation, which may be multiple $SYSCLK$ cycles.
- The internal High-Frequency Oscillator 0 has a programmable output frequency, which is factory programmed to 24.5 MHz. If user firmware adjusts the oscillator speed, it must be between 22 and 25 MHz during any flash write or erase operation. It is recommended to write the HFO0CAL register back to its reset value when writing or erasing flash.
- Flash can be safely programmed at any voltage above the supply monitor threshold (V_{VDDM}).
- Data Retention Information is published in the Quarterly Quality and Reliability Report.

4.1.5 Power Management Timing

Table 4.5. Power Management Timing

| Parameter | Symbol | Test Condition | Min | Typ | Max | Units |
|---------------------------|------------------------|--------------------------------------|-----|-----|-----|---------------|
| Idle Mode Wake-up Time | t_{IDLEWK} | | 2 | — | 3 | $SYSCLKs$ |
| Suspend Mode Wake-up Time | t_{SUS-} $PENDWK$ | $SYSCLK = HFOSC0$ $CLKDIV = 0x00$ | — | 170 | — | ns |
| Snooze Mode Wake-up Time | $t_{SLEEPWK}$ | $SYSCLK = HFOSC0$ $CLKDIV = 0x00$ | — | 12 | — | μs |

4.1.6 Internal Oscillators

Table 4.6. Internal Oscillators

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|---|------------------------------|-----------------------------------|------|------|------|-----------------------|
| High Frequency Oscillator 0 (24.5 MHz) | | | | | | |
| Oscillator Frequency | f_{HFOSC0} | Full Temperature and Supply Range | 24 | 24.5 | 25 | MHz |
| Power Supply Sensitivity | $\text{PSS}_{\text{HFOSC0}}$ | $T_A = 25\text{ }^\circ\text{C}$ | — | 0.5 | — | %/V |
| Temperature Sensitivity | $\text{TS}_{\text{HFOSC0}}$ | $V_{\text{DD}} = 3.0\text{ V}$ | — | 40 | — | ppm/ $^\circ\text{C}$ |
| High Frequency Oscillator 1 (48 MHz) | | | | | | |
| Oscillator Frequency | f_{HFOSC1} | Full Temperature and Supply Range | 47.3 | 48 | 48.7 | MHz |
| Power Supply Sensitivity | $\text{PSS}_{\text{HFOSC1}}$ | $T_A = 25\text{ }^\circ\text{C}$ | — | 0.02 | — | %/V |
| Temperature Sensitivity | $\text{TS}_{\text{HFOSC1}}$ | $V_{\text{DD}} = 3.0\text{ V}$ | — | 45 | — | ppm/ $^\circ\text{C}$ |
| Low Frequency Oscillator (80 kHz) | | | | | | |
| Oscillator Frequency | f_{LFOSC} | Full Temperature and Supply Range | 75 | 80 | 85 | kHz |
| Power Supply Sensitivity | $\text{PSS}_{\text{LFOSC}}$ | $T_A = 25\text{ }^\circ\text{C}$ | — | 0.05 | — | %/V |
| Temperature Sensitivity | TS_{LFOSC} | $V_{\text{DD}} = 3.0\text{ V}$ | — | 65 | — | ppm/ $^\circ\text{C}$ |

4.1.7 External Clock Input

Table 4.7. External Clock Input

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|---|--------------------|----------------|-----|-----|-----|------|
| External Input CMOS Clock Frequency (at EXTCLK pin) | f_{CMOS} | | 0 | — | 50 | MHz |
| External Input CMOS Clock High Time | t_{CMOSH} | | 9 | — | — | ns |
| External Input CMOS Clock Low Time | t_{CMOSL} | | 9 | — | — | ns |

4.1.8 ADC

Table 4.8. ADC

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|---------------------|--|-----|-------|--------------------|--------|
| Resolution | N _{bits} | 12 Bit Mode | 12 | | | Bits |
| | | 10 Bit Mode | 10 | | | Bits |
| Throughput Rate (High Speed Mode) | f _S | 12 Bit Mode | — | — | 200 | ksps |
| | | 10 Bit Mode | — | — | 800 | ksps |
| Throughput Rate (Low Power Mode) | f _S | 12 Bit Mode | — | — | 62.5 | ksps |
| | | 10 Bit Mode | — | — | 250 | ksps |
| Tracking Time | t _{TRK} | High Speed Mode | 230 | — | — | ns |
| | | Low Power Mode | 450 | — | — | ns |
| Power-On Time | t _{PWR} | | 1.2 | — | — | μs |
| SAR Clock Frequency | f _{SAR} | High Speed Mode, Reference is 2.4 V internal | — | — | 6.25 | MHz |
| | | High Speed Mode, Reference is not 2.4 V internal | — | — | 12.5 | MHz |
| | | Low Power Mode | — | — | 4 | MHz |
| Conversion Time | t _{CNV} | 10-Bit Conversion, SAR Clock = 12.25 MHz, System Clock = 24.5 MHz. | 1.1 | | | μs |
| Sample/Hold Capacitor | C _{SAR} | Gain = 1 | — | 5 | — | pF |
| | | Gain = 0.5 | — | 2.5 | — | pF |
| Input Pin Capacitance | C _{IN} | | — | 20 | — | pF |
| Input Mux Impedance | R _{MUX} | | — | 550 | — | Ω |
| Voltage Reference Range | V _{REF} | | 1 | — | V _{DD} | V |
| Input Voltage Range ¹ | V _{IN} | Gain = 1 | 0 | — | V _{REF} | V |
| | | Gain = 0.5 | 0 | — | 2xV _{REF} | V |
| Power Supply Rejection Ratio | PSRR _{ADC} | | — | 70 | — | dB |
| DC Performance | | | | | | |
| Integral Nonlinearity | INL | 12 Bit Mode | — | ±1 | ±2.3 | LSB |
| | | 10 Bit Mode | — | ±0.2 | ±0.6 | LSB |
| Differential Nonlinearity (Guaranteed Monotonic) | DNL | 12 Bit Mode | -1 | ±0.7 | 1.9 | LSB |
| | | 10 Bit Mode | — | ±0.2 | ±0.6 | LSB |
| Offset Error | E _{OFF} | 12 Bit Mode, V _{REF} = 1.65 V | -3 | 0 | 3 | LSB |
| | | 10 Bit Mode, V _{REF} = 1.65 V | -2 | 0 | 2 | LSB |
| Offset Temperature Coefficient | TC _{OFF} | | — | 0.004 | — | LSB/°C |

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|--------|----------------|-----|-------|-------|------|
| Slope Error | E_M | 12 Bit Mode | — | ±0.02 | ±0.1 | % |
| | | 10 Bit Mode | — | ±0.06 | ±0.24 | % |
| Dynamic Performance 10 kHz Sine Wave Input 1dB below full scale, Max throughput, using AGND pin | | | | | | |
| Signal-to-Noise | SNR | 12 Bit Mode | 61 | 66 | — | dB |
| | | 10 Bit Mode | 53 | 60 | — | dB |
| Signal-to-Noise Plus Distortion | SNDR | 12 Bit Mode | 61 | 66 | — | dB |
| | | 10 Bit Mode | 53 | 60 | — | dB |
| Total Harmonic Distortion (Up to 5th Harmonic) | THD | 12 Bit Mode | — | 71 | — | dB |
| | | 10 Bit Mode | — | 70 | — | dB |
| Spurious-Free Dynamic Range | SFDR | 12 Bit Mode | — | -79 | — | dB |
| | | 10 Bit Mode | — | -70 | — | dB |

Note:

1. Absolute input pin voltage is limited by the V_{DD} supply.

4.1.9 Voltage Reference**Table 4.9. Voltage Reference**

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|---|-----------------|---|------|------|------|--------|
| Internal Fast Settling Reference | | | | | | |
| Output Voltage (Full Temperature and Supply Range) | V_{REFFS} | 1.65 V Setting | 1.62 | 1.65 | 1.68 | V |
| | | 2.4 V Setting, $V_{DD} > 2.6$ V | 2.35 | 2.4 | 2.45 | V |
| Temperature Coefficient | TC_{REFFS} | | — | 50 | — | ppm/°C |
| Turn-on Time | t_{REFFS} | | — | — | 1.5 | μs |
| Power Supply Rejection | $PSRR_{REF FS}$ | | — | 400 | — | ppm/V |
| External Reference | | | | | | |
| Input Current | I_{EXTREF} | Sample Rate = 800 ksps; $V_{REF} = 3.0$ V | — | 8 | — | μA |

4.1.10 Temperature Sensor

Table 4.10. Temperature Sensor

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|---------------------------|-----------|---------------------------------|-----|------|-----|----------------------|
| Offset | V_{OFF} | $T_A = 0\text{ }^\circ\text{C}$ | — | 757 | — | mV |
| Offset Error ¹ | E_{OFF} | $T_A = 0\text{ }^\circ\text{C}$ | — | 17 | — | mV |
| Slope | M | | — | 2.85 | — | mV/ $^\circ\text{C}$ |
| Slope Error ¹ | E_M | | — | 70 | — | $\mu\text{V}/^\circ$ |
| Linearity | | | — | 0.5 | — | $^\circ\text{C}$ |
| Turn-on Time | | | — | 1.8 | — | μs |

Note:

1. Represents one standard deviation from the mean.

4.1.11 1.8 V Internal LDO Voltage Regulator

Table 4.11. 1.8V Internal LDO Voltage Regulator

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|----------------|-----------------|----------------|------|------|------|------|
| Output Voltage | $V_{OUT_1.8V}$ | | 1.78 | 1.85 | 1.92 | V |

4.1.12 5 V Voltage Regulator

Table 4.12. 5V Voltage Regulator

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|------------------------------------|---------------|---|-----|---------------------------|------|------|
| Input Voltage Range ¹ | V_{REGIN} | | 3.0 | — | 5.25 | V |
| Output Voltage on VDD ² | V_{REGOUT} | Output Current = 1 to 100 mA Regulation range ($V_{REGIN} \geq 4.1\text{V}$) | 3.1 | 3.3 | 3.6 | V |
| | | Output Current = 1 to 100 mA Dropout range ($V_{REGIN} < 4.1\text{V}$) | — | $V_{REGIN} - V_{DROPOUT}$ | — | V |
| Output Current ² | I_{REGOUT} | | — | — | 100 | mA |
| Dropout Voltage | $V_{DROPOUT}$ | Output Current = 100 mA | — | — | 0.8 | V |

Note:

- Input range to meet the Output Voltage on VDD specification. If the 5 V voltage regulator is not used, V_{REGIN} should be tied to VDD.
- Output current is total regulator output, including any current required by the device.

4.1.13 Comparators

Table 4.13. Comparators

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|-------------|---|-------|------|---------------|-----------|
| Response Time, CPMD = 00 (Highest Speed) | t_{RESP0} | +100 mV Differential, $V_{CM} = 1.65$ V | — | 110 | — | ns |
| | | -100 mV Differential, $V_{CM} = 1.65$ V | — | 160 | — | ns |
| Response Time, CPMD = 11 (Low- est Power) | t_{RESP3} | +100 mV Differential, $V_{CM} = 1.65$ V | — | 1.2 | — | μ s |
| | | -100 mV Differential, $V_{CM} = 1.65$ V | — | 4.5 | — | μ s |
| Positive Hysteresis Mode 0 (CPMD = 00) | HYS_{CP+} | CPHYP = 00 | — | 0.4 | — | mV |
| | | CPHYP = 01 | — | 8 | — | mV |
| | | CPHYP = 10 | — | 16 | — | mV |
| | | CPHYP = 11 | — | 32 | — | mV |

| Input Leakage Current with V _{IN} above V _{IO} | I _{LK} | V _{IO} < V _{IN} < V _{IO} +2.0 V | 0 | 5 | 150 | μA |

Note:

1. See [Figure 4.7 Typical V_{OH} Curves on page 35](#) and [Figure 4.8 Typical V_{OL} Curves on page 35](#) for more information.

4.1.15 USB Transceiver

Table 4.15. USB Transceiver

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|-----------|-------------------------|-------|------|-------|------------|
| Transmitter | | | | | | |
| Output High Voltage | V_{OH} | $V_{DD} \geq 3.0V$ | 2.8 | — | — | V |
| Output Low Voltage | V_{OL} | $V_{DD} \geq 3.0V$ | — | — | 0.8 | V |
| Output Crossover Point | V_{CRS} | | 1.3 | — | 2.0 | V |
| Output Impedance | Z_{DRV} | Driving High | 28 | 36 | 44 | Ω |
| | | Driving Low | 28 | 36 | 44 | |
| Pull-up Resistance | R_{PU} | Full Speed (D+ Pull-up) | 1.425 | 1.5 | 1.575 | k Ω |
| | | Low Speed (D- Pull-up) | | | | |
| Output Rise Time | T_R | Low Speed | 75 | — | 300 | ns |
| | | Full Speed | 4 | — | 20 | ns |
| Output Fall Time | T_F | Low Speed | 75 | — | 300 | ns |
| | | Full Speed | 4 | — | 20 | ns |
| Receiver | | | | | | |
| Differential Input Sensitivity | V_{DI} | $ (D+) - (D-) $ | 0.2 | — | — | V |
| Differential Input Common Mode Range | V_{CM} | | 0.8 | — | 2.5 | V |
| Input Leakage Current | I_L | Pullups Disabled | — | <1.0 | — | μA |
| Refer to the USB Specification for timing diagrams and symbol definitions. | | | | | | |

4.1.16 SMBus

Table 4.16. SMBus Peripheral Timing Performance (Master Mode)

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|---|---------------|----------------|---------|-----|---------|---------|
| Standard Mode (100 kHz Class) | | | | | | |
| I2C Operating Frequency | f_{I2C} | | 0 | — | 70^2 | kHz |
| SMBus Operating Frequency | f_{SMB} | | 40^1 | — | 70^2 | kHz |
| Bus Free Time Between STOP and START Conditions | t_{BUF} | | 9.4 | — | — | μs |
| Hold Time After (Repeated) START Condition | $t_{HD:STA}$ | | 4.7 | — | — | μs |
| Repeated START Condition Setup Time | $t_{SU:STA}$ | | 9.4 | — | — | μs |
| STOP Condition Setup Time | $t_{SU:STO}$ | | 9.4 | — | — | μs |
| Data Hold Time | $t_{HD:DAT}$ | | 275^3 | — | — | ns |
| Data Setup Time | $t_{SU:DAT}$ | | 300^3 | — | — | ns |
| Detect Clock Low Timeout | $t_{TIMEOUT}$ | | 25 | — | — | ms |
| Clock Low Period | t_{LOW} | | 4.7 | — | — | μs |
| Clock High Period | t_{HIGH} | | 9.4 | — | 50^4 | μs |
| Fast Mode (400 kHz Class) | | | | | | |
| I2C Operating Frequency | f_{I2C} | | 0 | — | 255^2 | kHz |
| SMBus Operating Frequency | f_{SMB} | | 40^1 | — | 255^2 | kHz |
| Bus Free Time Between STOP and START Conditions | t_{BUF} | | 2.6 | — | — | μs |
| Hold Time After (Repeated) START Condition | $t_{HD:STA}$ | | 1.3 | — | — | μs |
| Repeated START Condition Setup Time | $t_{SU:STA}$ | | 2.6 | — | — | μs |
| STOP Condition Setup Time | $t_{SU:STO}$ | | 2.6 | — | — | μs |
| Data Hold Time | $t_{HD:DAT}$ | | 275^3 | — | — | ns |
| Data Setup Time | $t_{SU:DAT}$ | | 300^3 | — | — | ns |
| Detect Clock Low Timeout | $t_{TIMEOUT}$ | | 25 | — | — | ms |
| Clock Low Period | t_{LOW} | | 1.3 | — | — | μs |
| Clock High Period | t_{HIGH} | | 2.6 | — | 50^4 | μs |

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|--------|----------------|-----|-----|-----|------|
| Note: | | | | | | |
| 1. The minimum SMBus frequency is limited by the maximum Clock High Period requirement of the SMBus specification. | | | | | | |
| 2. The maximum I2C and SMBus frequencies are limited by the minimum Clock Low Period requirements of their respective specifications. The maximum frequency cannot be achieved with all combinations of oscillators and dividers available, but the effective frequency must not exceed 256 kHz. | | | | | | |
| 3. Data setup and hold timing at 40 MHz or lower with EXTHOLD set to 1. | | | | | | |
| 4. SMBus has a maximum requirement of 50 μ s for Clock High Period. Operating frequencies lower than 40 kHz will be longer than 50 μ s. I2C can support periods longer than 50 μ s. | | | | | | |

Table 4.17. SMBus Peripheral Timing Formulas (Master Mode)

| Parameter | Symbol | Clocks |
|---|--------------|---------------|
| SMBus Operating Frequency | f_{SMB} | $f_{CSO} / 3$ |
| Bus Free Time Between STOP and START Conditions | t_{BUF} | $2 / f_{CSO}$ |
| Hold Time After (Repeated) START Condition | $t_{HD:STA}$ | $1 / f_{CSO}$ |
| Repeated START Condition Setup Time | $t_{SU:STA}$ | $2 / f_{CSO}$ |
| STOP Condition Setup Time | $t_{SU:STO}$ | $2 / f_{CSO}$ |
| Clock Low Period | t_{LOW} | $1 / f_{CSO}$ |
| Clock High Period | t_{HIGH} | $2 / f_{CSO}$ |

Note:

- f_{CSO} is the SMBus peripheral clock source overflow frequency.

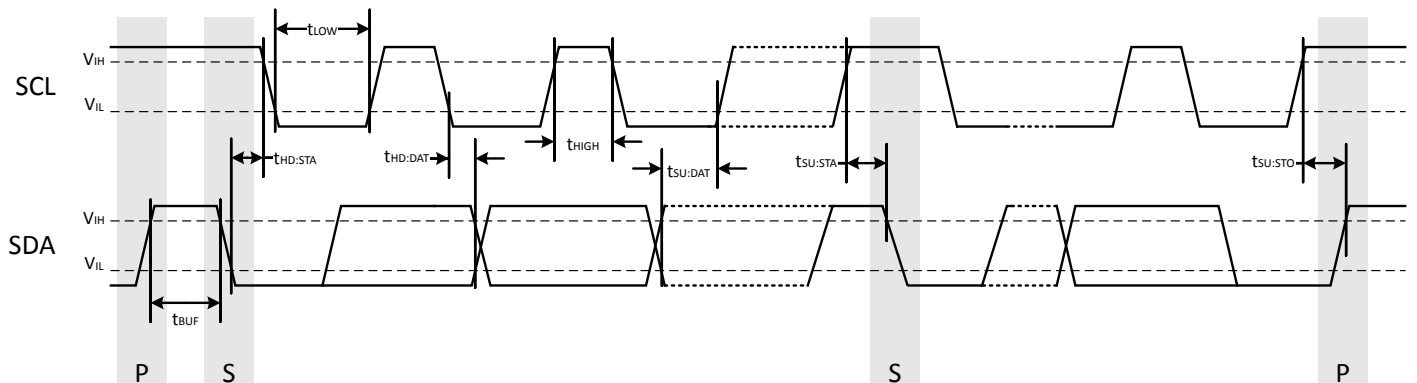

Figure 4.1. SMBus Peripheral Timing Diagram (Master Mode)

4.2 Thermal Conditions

Table 4.18. Thermal Conditions

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|--|---------------|------------------|-----|------|-----|------|
| Thermal Resistance (Junction to Ambient) | θ_{JA} | QFN-20 Packages | — | 60 | — | °C/W |
| | | QFN-28 Packages | — | 26 | — | °C/W |
| | | QSOP-24 Packages | — | 65 | — | °C/W |
| Thermal Resistance (Junction to Case) | θ_{JC} | QFN-20 Packages | — | 32.9 | — | °C/W |
| | | QFN-28 Packages | — | 18.8 | — | °C/W |
| Thermal Characterization Parameter (Junction to Top) | Ψ_{JT} | QFN-20 Packages | — | 0.88 | — | °C/W |
| | | QFN-28 Packages | — | 0.3 | — | °C/W |

Note:

1. Thermal resistance assumes a multi-layer PCB with any exposed pad soldered to a PCB pad.

4.3 Absolute Maximum Ratings

Stresses above those listed in [4.3 Absolute Maximum Ratings](#) may cause permanent damage to the device. This is a stress rating only and functional operation of the devices at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability. For more information on the available quality and reliability data, see the Quality and Reliability Monitor Report at <http://www.silabs.com/support/quality/pages/default.aspx>.

Table 4.19. Absolute Maximum Ratings

| Parameter | Symbol | Test Condition | Min | Max | Unit |
|---|-------------|-------------------------|---------|--------------|------|
| Ambient Temperature Under Bias | T_{BIAS} | | -55 | 125 | °C |
| Storage Temperature | T_{STG} | | -65 | 150 | °C |
| Voltage on VDD | V_{DD} | | GND-0.3 | 4.2 | V |
| Voltage on VIO ² | V_{IO} | | GND-0.3 | 4.2 | V |
| Voltage on VREGIN | V_{REGIN} | | GND-0.3 | 5.8 | V |
| Voltage on D+ or D- | V_{USBD} | | GND-0.3 | $V_{DD}+0.3$ | V |
| Voltage on I/O pins (including VBUS / P3.1) or RSTb | V_{IN} | $V_{IO} > 3.3\text{ V}$ | GND-0.3 | 5.8 | V |
| | | $V_{IO} < 3.3\text{ V}$ | GND-0.3 | $V_{IO}+2.5$ | V |
| Total Current Sunk into Supply Pin | I_{VDD} | | — | 400 | mA |
| Total Current Sourced out of Ground Pin | I_{GND} | | 400 | — | mA |
| Current Sourced or Sunk by any I/O Pin or RSTb | I_{IO} | | -100 | 100 | mA |
| Operating Junction Temperature | T_J | | -40 | 105 | °C |

Note:

1. Exposure to maximum rating conditions for extended periods may affect device reliability.
2. On devices without a VIO pin, $V_{IO} = V_{DD}$

5. Typical Connection Diagrams

5.1 Power

The figure below shows a typical connection diagram for the power pins of the EFM8UB1 devices when the internal regulator used and USB is connected (bus-powered).

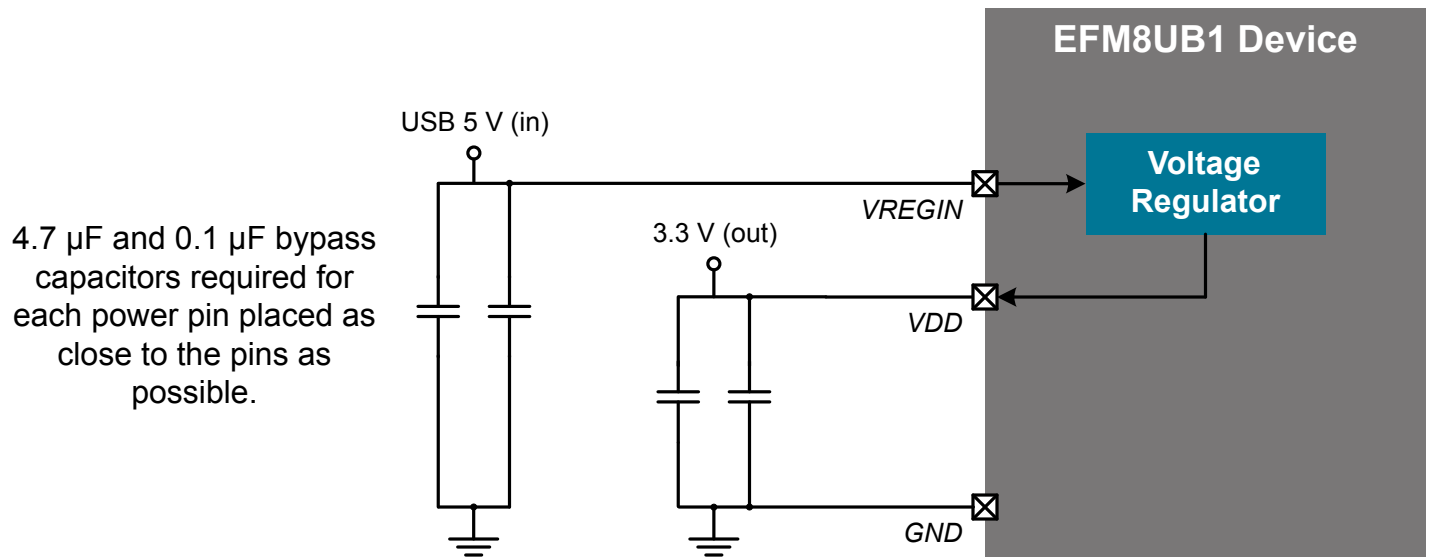

Figure 5.1. Connection Diagram with Voltage Regulator Used and USB Connected (Bus-Powered)

The figure below shows a typical connection diagram for the power pins of the EFM8UB1 devices when the internal regulator used and USB is connected (self-powered).

Figure 5.2. Connection Diagram with Voltage Regulator Used and USB Connected (Self-Powered)

The figure below shows a typical connection diagram for the power pins of the EFM8UB1 devices when the internal 5 V-to-3.3 V regulator is not used.

Figure 5.3. Connection Diagram with Voltage Regulator Not Used (Self-Powered)

5.2 USB

Figure 5.4 Bus-Powered Connection Diagram for USB Pins on page 38 shows a typical connection bus-powered diagram for the USB pins of the EFM8UB1 devices including ESD protection diodes on the USB pins. Bypass capacitors on VREGIN and VDD are required as discussed in 5.1 Power, but are not shown in the figure.

Note: The VBUS pin is not required as a sensing pin for proper operation in bus-powered configurations. Rather than using VBUS as a sensing pin, it is recommended to use the VBUS pin only as a GPIO by clearing VBUSEN and VBUSIE to 0 in the USB0CF register. To do this using the USB stack, set the device to use bus-powered mode.

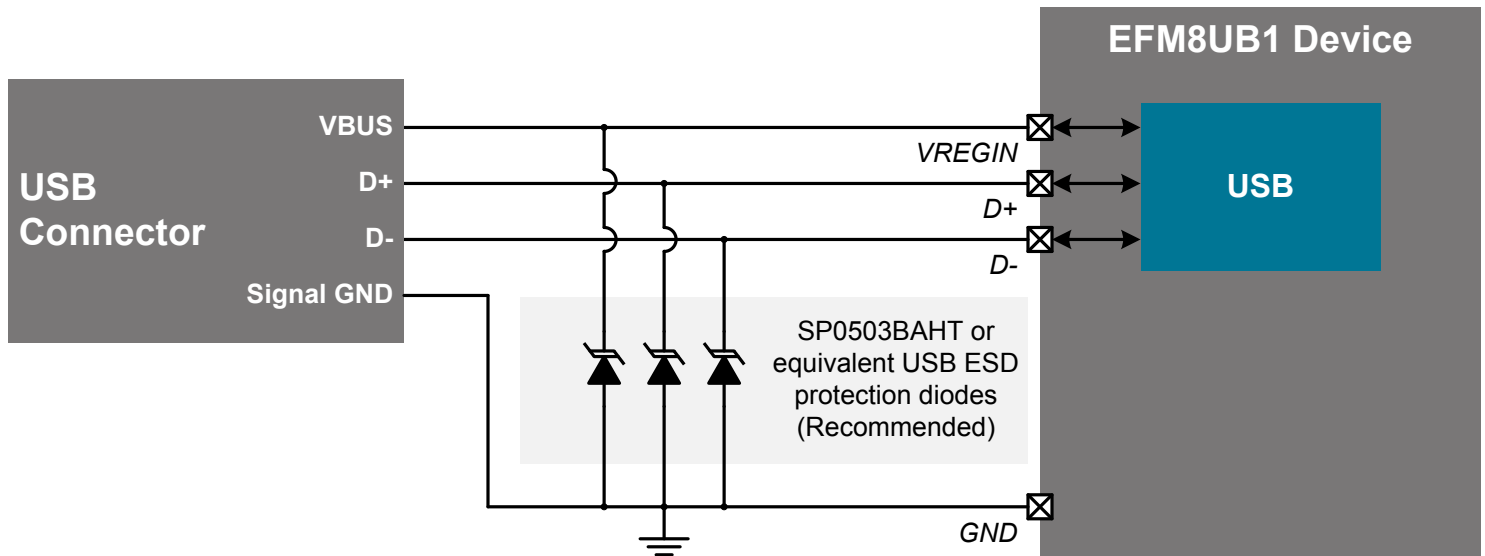

Figure 5.4. Bus-Powered Connection Diagram for USB Pins

Figure 5.5 Self-Powered Connection Diagram for USB Pins on page 39 shows a typical connection self-powered diagram for the USB pins of the EFM8UB1 devices including ESD protection diodes on the USB pins.

Note: There are two relevant restrictions on the VBUS pin voltage in this self-powered configuration. The first is the absolute maximum voltage on the VBUS pin, which is defined as $V_{IO} + 2.5\text{ V}$ in Table 4.19 Absolute Maximum Ratings on page 31. The second is the Input High Voltage (V_{IH}) for VBUS to detect when the device is connected to a bus, which is defined as $V_{IO} - 0.6\text{ V}$ in 4.1.14 Port I/O. A resistor divider (or functionally-equivalent circuit) on VBUS is required to meet these specifications and ensure reliable device operation. In this case, the current limitation of the resistor divider prevents overstress on the pin, even though the $V_{IO} + 2.5\text{ V}$ specification is not strictly met.

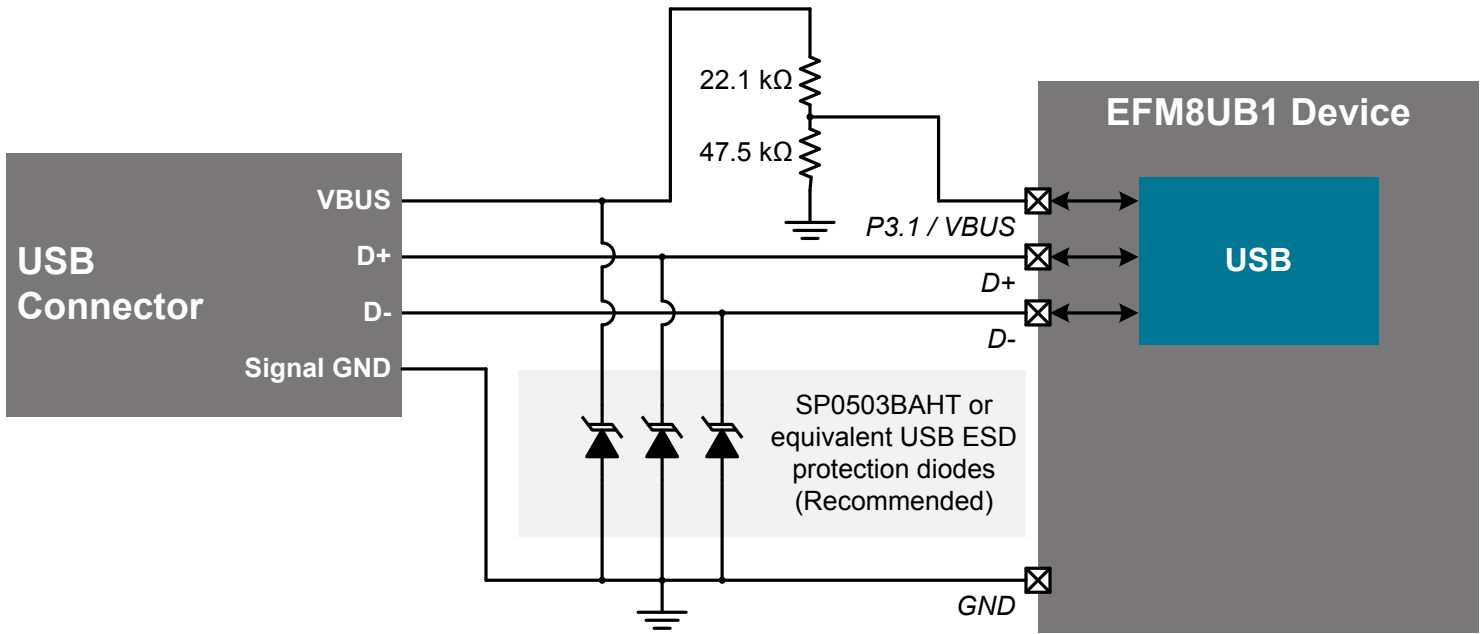

Figure 5.5. Self-Powered Connection Diagram for USB Pins

5.3 Debug

The diagram below shows a typical connection diagram for the debug connections pins. The pin sharing resistors are only required if the functionality on the C2D (a GPIO pin) and the C2CK (RSTb) is routed to external circuitry. For example, if the RSTb pin is connected to an external switch with debouncing filter or if the GPIO sharing with the C2D pin is connected to an external circuit, the pin sharing resistors and connections to the debug adapter must be placed on the hardware. Otherwise, these components and connections can be omitted.

For more information on debug connections, see the example schematics and information available in *AN124: Pin Sharing Techniques for the C2 Interface*. Application notes can be found on the Silicon Labs website (<http://www.silabs.com/8bit-appnotes>) or in Simplicity Studio.

Figure 5.6. Debug Connection Diagram

5.4 Other Connections

Other components or connections may be required to meet the system-level requirements. Application Note *AN203: 8-bit MCU Printed Circuit Board Design Notes* contains detailed information on these connections. Application Notes can be accessed on the Silicon Labs website (www.silabs.com/8bit-appnotes).

| Dimension | Min | Typ | Max |
|-----------|-----|------|-----|
| eee | | 0.08 | |
| Z | | 0.44 | |
| Y | | 0.18 | |

Note:

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to JEDEC outline MO-220 except for custom features D2, E2, L, Z, and Y which are toleranced per supplier designation.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

7.2 QFN28 PCB Land Pattern

Figure 7.2. QFN28 PCB Land Pattern Drawing

Table 7.2. QFN28 PCB Land Pattern Dimensions

| Dimension | Min | Max |
|-----------|-----|------|
| C1 | | 4.80 |
| C2 | | 4.80 |
| E | | 0.50 |
| X1 | | 0.30 |
| X2 | | 3.35 |
| Y1 | | 0.95 |
| Y2 | | 3.35 |

| Dimension | Min | Max |
|--|-----|-----|
| <p>Note:</p> <ol style="list-style-type: none"> 1. All dimensions shown are in millimeters (mm) unless otherwise noted. 2. This Land Pattern Design is based on the IPC-7351 guidelines. 3. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 μm minimum, all the way around the pad. 4. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release. 5. The stencil thickness should be 0.125 mm (5 mils). 6. The ratio of stencil aperture to land pad size should be 1:1 for all perimeter pads. 7. A 2 x 2 array of 1.2 mm square openings on a 1.5 mm pitch should be used for the center pad. 8. A No-Clean, Type-3 solder paste is recommended. 9. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components. | | |

7.3 QFN28 Package Marking

Figure 7.3. QFN28 Package Marking

The package marking consists of:

- P P P P P P P P – The part number designation.
- T T T T T T – A trace or manufacturing code.
- Y Y – The last 2 digits of the assembly year.
- W W – The 2-digit workweek when the device was assembled.
- # – The device revision (A, B, etc.).

Note: Firmware revision is not part of the package marking.

8. QSOP24 Package Specifications

8.1 Package Dimensions

Figure 8.1. Package Drawing

Table 8.1. Package Dimensions

| Dimension | Min | Typ | Max |
|-----------|-----------|-----|------|
| A | — | — | 1.75 |
| A1 | 0.10 | — | 0.25 |
| b | 0.20 | — | 0.30 |
| c | 0.10 | — | 0.25 |
| D | 8.65 BSC | | |
| E | 6.00 BSC | | |
| E1 | 3.90 BSC | | |
| e | 0.635 BSC | | |
| L | 0.40 | — | 1.27 |

| Dimension | Min | Typ | Max |
|-----------|-----|------|-----|
| theta | 0° | — | 8° |
| aaa | | 0.20 | |
| bbb | | 0.18 | |
| ccc | | 0.10 | |
| ddd | | 0.10 | |

Note:

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to JEDEC outline MO-137, variation AE.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

8.2 PCB Land Pattern

Figure 8.2. PCB Land Pattern Drawing

Table 8.2. PCB Land Pattern Dimensions

| Dimension | Min | Max |
|-----------|-----------|------|
| C | 5.20 | 5.30 |
| E | 0.635 BSC | |
| X | 0.30 | 0.40 |
| Y | 1.50 | 1.60 |

Note:

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. This land pattern design is based on the IPC-7351 guidelines.
3. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 μm minimum, all the way around the pad.
4. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
5. The stencil thickness should be 0.125 mm (5 mils).
6. The ratio of stencil aperture to land pad size should be 1:1 for all perimeter pads.
7. A No-Clean, Type-3 solder paste is recommended.
8. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

8.3 Package Marking

Figure 8.3. Package Marking

The package marking consists of:

- PPPPPPP – The part number designation.
- TTTTTT – A trace or manufacturing code.
- YY – The last 2 digits of the assembly year.
- WW – The 2-digit workweek when the device was assembled.
- # – The device revision (A, B, etc.).

9. QFN20 Package Specifications

9.1 QFN20 Package Dimensions

Figure 9.1. QFN20 Package Drawing

Table 9.1. QFN20 Package Dimensions

| Dimension | Min | Typ | Max |
|-----------|------|----------|------|
| A | 0.70 | 0.75 | 0.80 |
| A1 | 0.00 | 0.02 | 0.05 |
| A3 | | 0.20 REF | |
| b | 0.18 | 0.25 | 0.30 |

| <p>Note:</p> <ol style="list-style-type: none"> 1. All dimensions shown are in millimeters (mm) unless otherwise noted. 2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification. 3. This Land Pattern Design is based on the IPC-7351 guidelines. 4. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 µm minimum, all the way around the pad. 5. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release. 6. The stencil thickness should be 0.125 mm (5 mils). 7. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads. 8. A 2 x 2 array of 0.75 mm openings on a 0.95 mm pitch should be used for the center pad to assure proper paste volume. 9. A No-Clean, Type-3 solder paste is recommended. 10. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components. | | |

9.3 QFN20 Package Marking

Figure 9.3. QFN20 Package Marking

The package marking consists of:

- P P P P P P P P – The part number designation.
- T T T T T T – A trace or manufacturing code.
- Y Y – The last 2 digits of the assembly year.
- W W – The 2-digit workweek when the device was assembled.
- # – The device revision (A, B, etc.).

Note: Firmware revision is not part of the package marking.

10. Revision History

Revision 1.4

March, 2024

- Noted that all QSOP Package OPNs are EOL.
- Updated Silicon Labs recommendation for code security when using the Bootloader in the [3.10 Bootloader](#) section.
- Corrected 'E' dimension drawing in land pattern image in section [9.2 QFN20 PCB Land Pattern](#).

Revision 1.3

October, 2017

- Updated [Figure 3.1 Detailed EFM8UB1 Block Diagram on page 7](#) to show 1024 bytes of XRAM in the core, since the 1024 bytes of USB FIFO RAM are documented in the USB block.
- Updated [3.1 Introduction](#) to mention all device documentation.
- Updated text and figures in [5.1 Power](#) to remove mention of the VBUS pin.
- Updated [Figure 5.2 Connection Diagram with Voltage Regulator Used and USB Connected \(Self-Powered\) on page 37](#) to remove VBUS pin.
- Updated the title of [Figure 5.3 Connection Diagram with Voltage Regulator Not Used \(Self-Powered\) on page 37](#) to include "Self-Powered".
- Updated [5.2 USB](#) to add a note regarding VBUS and modified the language of the note regarding the required resistor divider on VBUS.
- Updated the maximum Voltage Reference Range specification to reference V_{DD} instead of V_{IO} in [4.1.8 ADC](#).
- Updated the maximum Input Range (CP+ or CP-) specification to reference V_{DD} instead of V_{IO} in [4.1.13 Comparators](#).
- Updated Weak Pull-Up Current specification condition to refer to V_{IO} instead of V_{DD} in [4.1.14 Port I/O](#).
- Added Z and Y dimensions and updated Note 3 in [Table 7.1 QFN28 Package Dimensions on page 51](#).
- Updated the QFN20 and QSOP24 C2D pins to not available on the crossbar in [6.3 EFM8UB1x-QFN20 Pin Definitions](#) and [6.2 EFM8UB1x-QSOP24 Pin Definitions](#).

Revision 1.2

March, 2017

- Updated [Figure 5.6 Debug Connection Diagram on page 40](#) to move the pull-up resistor on C2D / RSTb to after the series resistor instead of before.
- Added a reference to *AN945: EFM8 Factory Bootloader User Guide* in [3.10 Bootloader](#).
Added bootloader pinout information to [3.10 Bootloader](#).
- Added a note to [3.1 Introduction](#) referencing the Reference Manual.
- Specified the sizes of the SMBus and I2CSLAVE transmit and receive FIFOs.
- Added a note to [Table 4.2 Power Consumption on page 18](#) providing more information about the Comparator Reference specification.
- Adjusted the Normal Mode and Idle Mode typical and maximum numbers in [Table 4.2 Power Consumption on page 18](#) for $F_{SYSCLK} = 48$ MHz and $F_{SYSCLK} = 24.5$ MHz.
- Added a note linking to the Typical VOH and VOL Performance graphs in [4.1.14 Port I/O](#).
- Added [4.1.11 1.8 V Internal LDO Voltage Regulator](#).
- Added CRC Calculation Time to [4.1.4 Flash Memory](#).
- Added specifications for [4.1.16 SMBus](#).
- Added Thermal Resistance (Junction to Case) and Thermal Characterization Parameter (Junction to Top) for QFN20 and QFN28 packages to [4.2 Thermal Conditions](#).
- Updated [5.2 USB](#) typical connections chapter to add a note and resistor divider for self-powered configurations.
- Corrected the application note number for *AN124: Pin Sharing Techniques for the C2 Interface* in [5.3 Debug](#).
- Adjusted D, E, and aaa in [QFN28 Package Dimensions](#).

Revision 1.1

December, 2015

- Updated [3.2 Power](#) to properly reflect that a comparator falling edge wakes the device from Suspend and Snooze.
- Added Note 4 to [Table 4.1 Recommended Operating Conditions on page 17](#).
- Added [5.3 Debug](#).

Revision 1.0

- Updated any TBD numbers in [4.1 Electrical Characteristics](#) and adjusted various specifications.
- Updated VOH and VOL graphs in [Figure 4.7 Typical V_{OH} Curves on page 35](#) and [Figure 4.8 Typical V_{OL} Curves on page 35](#) and updated the VOH and VOL specifications in [Table 4.14 Port I/O on page 27](#).
- Added more information to [3.10 Bootloader](#).
- Updated part numbers to Revision C.

Revision 0.3

- Updated QFN20 packaging and landing diagram dimensions.
- Updated QFN28 D and E minimum value.
- Updated some characterization TBD values.
- Added maximum allowable voltages on D+ and D- and added VBUS / P3.1 to the standard I/O row in [Table 4.19 Absolute Maximum Ratings on page 31](#).
- Added a diagram to [5.1 Power](#) for cases when the internal 5 V-to-3.3 V regulator is not used.
- Updated the 5 V-to-3.3 V regulator Electrical Characteristics table.
- Added Stop mode to the Power Modes table in [3.2 Power](#).

Revision 0.2

- Initial release.

Disclaimer

Silicon Labs intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Labs products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Labs reserves the right to make changes without further notice to the product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Without prior notification, Silicon Labs may update product firmware during the manufacturing process for security or reliability reasons. Such changes will not alter the specifications or the performance of the product. Silicon Labs shall have no liability for the consequences of use of the information supplied in this document. This document does not imply or expressly grant any license to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any FDA Class III devices, applications for which FDA premarket approval is required or Life Support Systems without the specific written consent of Silicon Labs. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Labs products are not designed or authorized for military applications. Silicon Labs products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons. Silicon Labs disclaims all express and implied warranties and shall not be responsible or liable for any injuries or damages related to use of a Silicon Labs product in such unauthorized applications.
