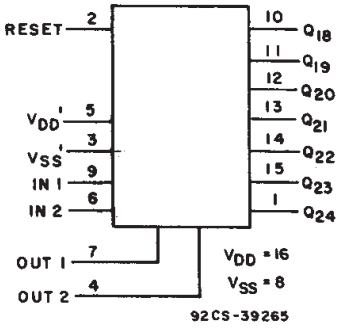
CMOS 24-Stage Frequency Divider

High-Voltage Types (20-Volt Rating)



FUNCTIONAL DIAGRAM

Features:

- *Reset disables the RC oscillator for low-power standby condition*
- *V_{DD}' and V_{SS}' pins are brought out from the crystal oscillator to allow use of external resistors for low-power operation*
- *Maximum input current of 1 μA at 18 V over full package-temperature range: 100 nA at 18 V and 25°C*
- *Common reset*
- *100% tested for 20-V quiescent current*
- *5, 10 and 15 V parametric ratings*
- *Standardized symmetrical output characteristics*
- *Meets all requirements of JEDEC Standard No. 13B, "Standard Specifications for Description of 'B' Series CMOS Devices"*

■ CD4521B consists of an oscillator section and 24 ripple-carry binary counter stages. The oscillator configuration (using IN1) allows design of either RC or crystal oscillator circuits. IN1 should be tied either HIGH or LOW when not in use. A HIGH on the RESET causes the counter to go to the all-0's state and disables the oscillator. The count is advanced on the negative transition of IN1 (and IN2). A time-saving test mode is described in the Functional Test Sequence Table and in Fig. 6.

The CD4521B types are supplied in 16-lead dual-in-line plastic packages (E suffix), 16-lead small-outline packages (M, M96, MT, and NSR suffixes), and 16-lead thin shrink small-outline packages (PW and PWR suffixes).

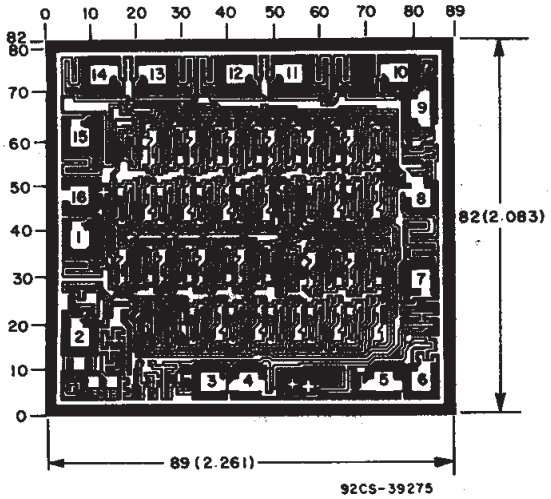
FUNCTIONAL TEST SEQUENCE

INPUTS		OUTPUTS				COMMENTS
RESET	IN 2	OUT 2	V_{SS}'	V_{DD}'	Q18-Q24	
1	0	0	V_{DD}	V_{SS}	LOW	Counter is in three 8-stage sections in parallel mode. Counter is reset. IN 2 and OUT 2 are tied together.
0	1	1	V_{DD}	V_{SS}		First LOW-to-HIGH transition at IN 2.
0	0 1 — — —	0 1 — — —	V_{DD}	V_{SS}		255 LOW-to-HIGH transitions are clocked in at IN 2.
0	1	1	V_{DD}	V_{SS}	HIGH	The 255th LOW-to-HIGH transition.
0	0	0	V_{DD}	V_{SS}	HIGH	Counter is converted back to 24-stage serial-mode operation.
0	0	0	V_{SS}	V_{SS}	HIGH	
0	1	0	V_{SS}	V_{DD}	HIGH	
0	1		V_{SS}	V_{DD}	HIGH	OUT 2 reverts to output operation.
0	0		V_{SS}	V_{DD}	LOW	Counter ripples from an all-HIGH state to an all-LOW state.

A test function, which divides, has been included to reduce the time required to test all 24 stages of the counter. Three sections are loaded in parallel to 255 counts, forcing all the outputs to be in the HIGH state. The counter is changed back to serial-mode operation and one additional LOW-to-HIGH transition is entered at IN 2, which causes the outputs to ripple from an all-HIGH state to an all-LOW state.



Dimensions and pad layout for CD4521BH.

Dimensions in parentheses are in millimeters and are derived from the basic inch dimensions as indicated. Grid graduations are in mils (10^{-3} inch).

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
