## Purchase and inquiry

Manufacturer Product Number:

HT40

Series:

-

Voltage - Breakover:

35 ~ 45V

Current - Peak Output:

2 A

Package / Case:

DO-204AH, DO-35, Axial

Base Product Number:

HT4

Manufacturer:

Littelfuse Inc.

Product Status:

Obsolete

Current - Breakover:

15  $\mu$ A

Operating Temperature:

-40°C ~ 125°C (TJ)

Supplier Device Package:

DO-35

## Environmental & Export classification

RoHS Status:

ROHS3 Compliant

ECCN:

EAR99

Moisture Sensitivity Level (MSL):

1 (Unlimited)

HTSUS:

8541.30.0080

RoHS

**HTxxx & HTMxxx & STxxx Series**

**OBSOLETE**

**Description**

The HTM, HT, and ST series of bilateral trigger DIACs offer a range of voltage characteristics from 27V to 70V. A DIAC semiconductor is a full-wave or bidirectional Thyristor. It is triggered from a blocking state to a conduction state for either polarity of applied voltage whenever the amplitude of applied voltage exceeds the breakover voltage of the DIAC.

**Features & Benefits**

- RoHS compliant
  - Bilateral triggering device
  - Glass-passivated junctions
  - Wide voltage range selections
  - Long-term reliability
  - Parameter stability
  - Reliable barrier against junction contamination
- ST Series:**
- Epoxy SM package (DO-214)
  - High-temperature, solder bonded die attachment
- HTM/HT Series:**
- MINIMELF/DO-35 trigger package

**Schematic Symbol**

**Applications**

DIACs are used to trigger Triacs and SCRs in phase control circuits for lamp dimming, universal motor speed control, and heat control. They are used also for triggering transistors in solid state ballast lighting controls.

**Absolute Maximum Ratings**

| Symbol      | Parameter                      | Test Conditions                                                       | Min | Max                        | Unit             |
|-------------|--------------------------------|-----------------------------------------------------------------------|-----|----------------------------|------------------|
| $I_{TRM}$   | Pulse On-State Current         | 120PPS, $T_A \leq 40^\circ\text{C}$<br>pulse width = 10 $\mu\text{S}$ |     | 2<br>1.5 <sup>(*)</sup>    | A                |
| $T_S$       | Storage Temperature Range      |                                                                       | -40 | +125                       | $^\circ\text{C}$ |
| $T_J$       | Operating Junction Temperature |                                                                       | -40 | +125                       | $^\circ\text{C}$ |
| $P_{D(AV)}$ | Device Power Dissipation       | $T_A = -40^\circ\text{C}$ to $+40^\circ\text{C}$                      |     | See Product Selector Table | mW               |

(\*)Only Applies to HT-60

Notes:

1. Service Dissipation (at  $T_A = -40^\circ\text{C}$  to  $+40^\circ\text{C}$ ): 250mW for DO-35 and MINIMELF/SOD-80 and 300mW for DO214
2. Above  $+40^\circ\text{C}$ , Derate: 3.6mW/ $^\circ\text{C}$  for DO-35 and MINIMELF/SOD-80 and 3mW/ $^\circ\text{C}$  for DO214

**OBSOLETE**

**Electrical Characteristics (T<sub>j</sub> = 25°C, unless otherwise specified)**

(\*) Only Applies to HT-60

Electrical Characteristic Notes:

1. Breakover voltage symmetry as close as 1V is available from the factory for these products.
2. See Figure 4 and Figure 5 for test circuit and waveforms.

3. Typical switching time is 900 nano-seconds measured at I<sub>pk</sub> (Figure 4) across a 20 Ω resistor (Figure 5). Switching time is defined as rise time of I<sub>pk</sub> between the 10% to 90% points

4. See V-I Characteristics  
 Static Characteristics - Not Applicable

**Design Considerations**

Careful selection of the correct device for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Overheating and surge currents are the main killers of DIACs. Correct mounting, soldering, and forming of the leads also help protect against component damage.

| D          | 0.018  | 0.022 | 0.458       | 0.558 |
| E          | 1.000  |       | 25.400      |       |

Notes:

- Package contour optional within dimensions A and C. Slugs, if any, shall be included within this cylinder but shall not be subject to the minimum limit of Dimension A.
- Lead diameter is not controlled in this zone to allow for flash, lead finish build-up and minor irregularities other than slugs.
